Purpose and Audience

For today’s Visa® merchant, accepting Visa payment cards has become simultaneously easier and more complex. Electronic terminals and card acceptance devices make transaction processing automatic and seemingly effortless, raising potential profitability. However, they also create increased possibilities for processing mistakes and fraudulent transactions that can result in copy requests and chargebacks.

In addition, the walls between card-present and card-not-present transactions have become less obvious as growing numbers of traditional “brick and mortar” merchants launch e-commerce web sites, transforming themselves into “click and mortar” businesses. Such merchants must, in effect, be “bilingual,” familiar with both card-present and card-not-present procedures.

*Rules for Visa Merchants—Card Acceptance and Chargeback Management Guidelines* is a comprehensive manual for all businesses that accept Visa transactions. The purpose of this guide is to provide merchants and their sales staffs with accurate, up-to-date information on processing Visa transactions, while minimizing risk of loss from fraud and chargebacks. The book is targeted at both card-present and card-not-present merchants and their employees, and includes requirements and best practices for doing business on the Internet. It also contains detailed information on the most common types of chargebacks merchants receive and what you can do to remedy or prevent them.
Contents

Rules for Visa Merchants—Card Acceptance and Chargeback Management Guidelines is organized to allow users to find the information they need quickly and easily. The table of contents serves as an index of the topics and material covered.

Topics covered include:

✔ Section 1: Getting Down to Basics: An overview of the how Visa transactions are processed, from point of transaction to clearing and settlement. A list of key Visa policies for merchants is also included.

✔ Section 2: Card-Present Transactions: Requirements and best practices for processing card-present transactions at the point of sale, including how to minimize key-entered transactions and ensure legible sales receipts. Suspicious transactions, Code 10 calls, and card recovery procedures are also discussed.

✔ Section 3: Card-Not-Present Transactions: Requirements and best practices for processing card-not-present transactions, including mail order, telephone order, and Internet sales. Visa fraud prevention tools, like the Address Verification Service, and Card Verification Value 2 (CVV2); requirements for e-commerce web sites; and procedures for recurring transactions are also covered.

✔ Section 4: Visa Cardholder Information Security Program (CISP): The Payment Card Industry (PCI) Data Security Standard that Visa requires merchants and their service providers to implement to ensure the security of confidential cardholder account information.

✔ Section 5: Copy Requests: Requirements and best practices for responding to a request for a copy of a sales receipt to resolve a cardholder dispute. Information on minimizing copy requests, ensuring legible receipts, and meeting sales draft requirements are also covered.

✔ Section 6: Chargebacks: Requirements and best practices for processing transactions that are charged back to you by your merchant bank, from the card issuer. This section includes strategies for chargeback prevention, as well as information on how and when to resubmit a charged-back transaction to your merchant bank. A brief compliance process overview is also included.

✔ Section 7: Chargeback Reason Codes: Detailed information on the reason codes for the most common types of chargebacks that merchants receive. For each reason code, a definition is given, along with the merchant actions—or failure to act—that may have caused the chargeback, and recommendations for resubmitting the transaction and preventing similar chargebacks in the future.
Appendix 1: Training Your Troops: A comprehensive list of Visa print and multimedia materials that merchants can use for training their employees on card acceptance and fraud prevention procedures.

Appendix 2: Glossary: A list of terms used in the book.

Disclaimer

The information in this guide is current as of the date of printing. However, card acceptance, processing, and chargeback procedures are subject to change. This guide contains information based on the current Visa U.S.A. Inc. Operating Regulations. If there are any technical differences between the Visa U.S.A. Inc. Operating Regulations and this guide, the Visa U.S.A. Inc. Operating Regulations will prevail in every instance. Your merchant agreement and the Visa U.S.A. Inc. Operating Regulations take precedence over this guide or any updates to its information.

For further information about the rules or practices covered in this guide, contact your merchant bank.
SECTION 1 Getting Down to Basics

What’s Covered

- Visa Transaction Processing—From Start to Finish
- Visa Rules
- Visa Rules for Returns and Exchanges
- Visa Rules for PIN-less Payment Brand Acceptance
- Dynamic Currency Conversion (DCC) Compliance at the Point of Sale
Visa Transaction Processing—From Start to Finish

By accepting Visa cards at your point of sale, you become an integral part of the Visa payment system. That’s why it’s important that you start with a clear picture of the Visa card transaction process: what it is, how it works, and who’s involved. This basic knowledge will provide you with a conceptual framework for the policies and procedures covered in this guide. It will also help you to understand the major components of payment processing and how they affect the way you do business.

Who Does What—Parties to Visa Transactions

Besides you and your customers, several other parties are involved in every Visa transaction. The following summary will help you and your sales staff to better understand who does what.

A cardholder is an authorized user of Visa payment cards or other Visa payment products.

A merchant is any business entity that is authorized to accept Visa cards for the payment of goods and services.

A merchant bank is a financial institution that contracts with merchants to accept Visa cards for payment of goods and services. A merchant bank may also contract with third-party processors to provide many of these services.

A card issuer is a financial institution that maintains the Visa cardholder relationship. It issues Visa cards and contracts with its cardholders for billing and payment of transactions.

Visa is a membership corporation of financial institutions that issue Visa cards and/or sign merchants to accept Visa cards for payment of goods and services. Visa provides card products, promotes the Visa brand, and establishes the rules and regulations governing member participation in Visa programs. Visa also operates the world’s largest consumer payment system to facilitate the flow of transactions between members.
VisaNet® is part of Visa’s consumer payment system. It is itself a collection of systems that includes:

- **An authorization service** through which issuers can approve or decline individual Visa card transactions.
- **A clearing and settlement service** that processes transactions electronically between merchant banks and issuers to ensure that:
  - Visa transaction information moves from merchant banks to issuers for posting to cardholders’ accounts.
  - Payment for Visa transactions moves from issuers to merchant banks to be credited to the merchant’s account.

### Transaction Life Cycles

The following illustrations show the life cycle for Visa card transactions, for both card-present and card-not-present purchases. Processing events and activities may vary slightly for any one merchant, merchant bank, or card issuer, depending on card and transaction type, and the processing system used.

#### Authorization

1. **Cardholder** presents a Visa card to pay for purchases. For card-not-present transactions, the cardholder provides the merchant with the account number, expiration date, billing address, and CVV2.

2. **Merchant** swipes the card, enters the dollar amount, and transmits an authorization request to the merchant bank. For card-not-present transactions, the account number and other information may be digitally or key-entered.

3. **Merchant bank** electronically sends the authorization request to VisaNet.

4. **VisaNet** passes on the request to the card issuer.

5. **Card issuer** approves or declines the transaction.

6. **VisaNet** forwards the card issuer’s authorization response to the merchant bank.

7. **Merchant bank** forwards the response to the merchant.

8. **Merchant** receives the authorization response and completes the transaction accordingly.
Clearing and Settlement

9. Merchant deposits the transaction receipt with merchant bank.*

10. Merchant bank credits the merchant’s account and electronically submits the transaction to Visa for settlement.

11. VisaNet:
   • facilitates settlement.
   • pays the merchant bank and debits the card issuer account, then sends the transaction to the card issuer.

12. Card issuer:
   • posts the transaction to the cardholder account.
   • sends the monthly statement to the cardholder.

13. Cardholder receives the statement.

*Merchants or their agents that store, process, or transmit data may not store sensitive authentication data (full magnetic-stripe or chip) contents. Card Verification Value 2 (CVV2), or PIN Verification Value (PVV)—even if it is encrypted. Once an authorization is processed, such data should no longer exist. The only components of the magnetic stripe that can be stored are name, account number, and expiration date.
Visa Rules

U.S. merchants must follow basic card acceptance rules for all Visa transactions. Careful and consistent adherence to the Visa USA rules outlined in this section will help you to enhance customer satisfaction and increase your profitability. If you have any questions about any of the Visa rules presented here, contact your merchant bank.

**Acceptance Options**

To offer the broadest possible range of payment options to consumers, most merchants choose to accept all categories of Visa debit and credit cards. U.S. merchants, however, may accept:

- All Visa cards
- Visa credit and business cards only
- Visa consumer debit and prepaid cards only

These acceptance options apply only to cards issued in the United States. Merchants accepting any category of Visa cards must honor all foreign-issued Visa cards presented for payment.

**Visa Logo**

Display the Visa logo at the merchant location or on catalogs, sales materials, or web sites. Depending on the card acceptance option you choose, both card-present and card-not present merchants must display the appropriate Visa logo or wordmark to advise customers of your payment options. Visa has developed the following logos:

- All Visa Cards accepted
- Visa Debit Category accepted (Merchant chooses not to accept credit and business category)
- Visa Credit and Business Category accepted (Merchant chooses not to accept debit category)

For Automated Fuel Dispensing (AFD) merchants, the Visa logo must be displayed on or near the dispenser.

**Dollar Minimums and Maximums**

Always honor valid Visa cards in your acceptance category, regardless of the dollar amount of the purchase. Imposing minimum or maximum purchase amounts in order to accept a Visa card transaction is a violation of the Visa rules.
Always treat Visa transactions like any other transaction; that is, you may not impose any surcharge on a Visa transaction. You may, however, offer a discount for cash transactions, provided that the offer is clearly disclosed to customers and the cash price is presented as a discount from the standard price charged for all other forms of payment.

Convenience Fees

For merchants who offer an alternate payment channel for customers to pay for goods or services, a convenience fee may be added to the transaction amount. If the merchant chooses to assess a convenience fee to its customers, the merchant must adhere to the following rules:

- The fee is being charged for a bona fide convenience of using an alternative payment channel outside of the merchant’s normal business practice (see example below).
- The fee:
  - must be disclosed to the customer as a charge for the convenience of using the alternate method to pay
  - is applied only to non-face-to-face transactions
  - must be a flat or fixed amount, regardless of the amount of the payment due
  - is applied to all forms of payment products accepted in the alternative payment channel
  - is included as part of the total transaction amount
  - cannot be added to a recurring transaction
  - is assessed by the merchant that provides the goods or services to the cardholder and not a third party
- The customer must be given the opportunity to cancel prior to the completion of the transaction

Example:
The merchant provides utility services to its customers, and the customary way to pay is by mail or in person at the merchant’s location. For the convenience of its customers, the merchant also offers a website for payments. In this example, the merchant may apply a convenience fee to payments made via the website.

For further information on Convenience Fees, please contact your merchant bank.

Taxes

Include any required taxes in the total transaction amount. Do not collect taxes separately in cash. This policy reflects the needs of the many Visa cardholders who must have written records of the taxes they pay for goods and services.

Laundering

Deposit transactions only for your own business. Depositing transactions for a business that does not have a valid merchant agreement is called laundering or factoring. Laundering is not allowed; it is a form of fraud associated with high chargeback rates and the potential for promoting illegal activity.
<table>
<thead>
<tr>
<th>Section</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Zero-Percent Tip</td>
<td>For restaurant, taxicabs, limousines, bars, taverns, beauty/barber shops, health/beauty spa merchants transactions with a Visa credit or debit card, authorize only for the known amount, not the transaction amount plus estimated tip. Cardholders now have the ability to check their credit or checking accounts almost instantaneously via phone, the Internet, or an ATM. Consequently, an authorization that includes an estimated tip can reduce a cardholder’s available funds or credit by an unrecognizable or unexpected amount. This kind of transaction may occur if a cardholder leaves a cash tip or adds a tip that is less than the estimated amount used for authorization; for example, if a restaurant authorizes for an estimated 20 percent tip, but the customer adds on only 15 percent.</td>
</tr>
<tr>
<td>No Cash Refunds</td>
<td>Complete a Visa credit receipt for merchandise returns or adjustments. Do not provide cash refunds for returned merchandise originally purchased with a Visa card. Visa does not permit cash refunds for any credit or debit card transaction. By issuing credits, you protect your customers from individuals who might fraudulently make a purchase on their Visa account and then return the merchandise for cash. If a transaction was conducted with a Visa prepaid card and the cardholder is returning items, but has discarded this card, you may give a cash refund or in-store credit.</td>
</tr>
<tr>
<td>Deposit Time Limits</td>
<td>Deposit your Visa transaction receipts within five calendar days of the transaction date. The sooner you deposit transaction receipts with your merchant bank, the sooner you get paid! For card-not-present transactions, the transaction date is the ship date, not the order date. Transactions deposited more than 30 days after the original transaction date may be charged back to you.</td>
</tr>
<tr>
<td>Delivery of Goods and Services</td>
<td>Deliver the merchandise or services to the cardholder at the time of the transaction. Cardholders expect immediate delivery of goods and services unless other delivery arrangements have been made. For card-not-present transactions, cardholders should be informed of delivery method and tentative delivery date. Transactions cannot be deposited until goods or services have been delivered.</td>
</tr>
<tr>
<td>Delayed Delivery</td>
<td>For a delayed delivery, obtain two authorizations: one for the deposit amount and one for the balance amount. Some merchandise, such as a custom-covered sofa, requires delivery after the transaction date. In these delayed-delivery situations, the customer pays a deposit at the time of the transaction and agrees to pay the balance upon delivery of the merchandise or services. To complete a delayed-delivery transaction, you should:</td>
</tr>
<tr>
<td></td>
<td>• Create two transaction receipts—one for the deposit and one for the balance. Write “Deposit” or “Balance,” as appropriate, on the receipt.</td>
</tr>
<tr>
<td></td>
<td>• Obtain an authorization for each transaction receipt on their respective transaction dates. Ensure an authorization code is on each receipt; if your POS device does not automatically print authorization codes on sales receipts, write the codes on the receipts so they are clearly identifiable as such.</td>
</tr>
</tbody>
</table>
• **Write “Delayed Delivery”** along with the authorization code on each transaction receipt.

You may deposit the receipt for the deposit portion of the transaction before delivery of the goods or services. However, you must not deposit the transaction receipt for the balance amount prior to delivery.

**Cardholder Information**

Keep cardholder account numbers and personal information confidential. Cardholders expect you to safeguard any personal or financial information they may give you in the course of a transaction. Keeping that trust is essential to fraud reduction and good customer service. Cardholder account numbers and other personal information should be released only to your merchant bank or processor, or as specifically required by law.

For more information on Visa’s data security requirements and programs, see Section 4, *Visa Cardholder Information Security Program* on page 55.

**Merchant Servicer Registration**

Visa merchant banks must register Third-Party Merchant Agents in accordance with the *Visa U.S.A. Inc. Operating Regulations*. A merchant servicer is defined by Visa as a third-party agent that has a direct relationship with a merchant instead of the merchant bank. This type of Agent performs services such as payment gateway, fraud scrubbing, loyalty programs, etc. Member banks and their merchants are responsible for ensuring merchant servicers maintain compliance with cardholder data security and storage regulations.

**Data Storage**

Merchants should also be aware of the following data security requirements:

- **Magnetic-Stripe Data.** Do not store magnetic-stripe data after receiving authorization. After a transaction is authorized, the full contents of track data, which is read from the magnetic stripe, must not be retained on any systems. The account number, expiration date, and name are the only elements of track data that may be retained if held in a CISP-compliant manner.

- **Avoid CVV2 Storage.** All merchants are prohibited from storing CVV2 data. When asking a cardholder for CVV2, merchants must not document this information on any kind of paper order form or store it on any database.

- **Know your liability.** Many merchant agreements now include provisions that hold businesses liable for losses resulting from compromised card data if a business (or its third-party processor) lacks adequate data security.

For more information on Visa’s data security requirements and programs, see Section 4, *Visa Cardholder Information Security Program* on page 55.
Visa Rules for Returns and Exchanges

As a merchant, you are responsible for establishing the merchandise return and adjustment (credit) policies that will provide your business with maximum profitability and customer service. Clear disclosure of these policies can help you avoid misunderstandings and potential cardholder disputes. Visa will support your policies, provided they are clearly disclosed to cardholders before the completion of a transaction.

If you are unsure about how to disclose your return and adjustment policies, contact your merchant bank for further guidance.

Disclosure for Card-Present Merchants

For card-present transactions, Visa will accept that proper disclosure has occurred before a transaction is completed if the following (or similar) disclosure statements are legibly printed on the face of the transaction receipt near the cardholder signature line.

<table>
<thead>
<tr>
<th>DISCLOSURE STATEMENT</th>
<th>WHAT IT MEANS</th>
</tr>
</thead>
<tbody>
<tr>
<td>No Refunds or Returns</td>
<td>Your establishment does not issue refunds and does not accept returned merchandise or merchandise exchanges.</td>
</tr>
<tr>
<td>Exchange Only</td>
<td>Your establishment is willing to exchange returned merchandise for similar merchandise that is equal in price to the amount of the original transaction.</td>
</tr>
<tr>
<td>In-Store Credit Only</td>
<td>Your establishment takes returned merchandise and gives the cardholder an in-store credit for the value of the returned merchandise.</td>
</tr>
<tr>
<td>Special Circumstances</td>
<td>You and the cardholder have agreed to special terms (such as delivery charges or restocking fees). The agreed-upon terms must then be written on the transaction receipt or a related document (for example, an invoice). The cardholder’s signature on the receipt or invoice indicates acceptance of the agreed-upon terms.</td>
</tr>
</tbody>
</table>
Disclosure for Card-Not-Present Merchants

**Mail Order or Telephone Order**

For proper disclosure, your refund and credit policies must be mailed, e-mailed, or faxed to the cardholder. To complete the sale, the cardholder must sign and return the disclosure statement to you.

**Internet**

Your refund and credit policies should be available to online customers through clearly visible links on your home page. You should also provide “click-through” confirmation for important elements of the policy. For example, when purchasing tickets for a sporting event, customers should be able to click on a button—**Accept** or **I Agree**—to acknowledge that they understand the tickets are non-returnable unless the event is postponed or cancelled.
Visa Rules for PIN-less Payment Brand Acceptance

It's up to Visa Merchant banks to help their merchants understand and follow Visa payment acceptance rules if they elect to implement a PIN-less payment option for alternative debit cards. To this end, you are encouraged to work closely with your merchants and their third-party agents to ensure that the following practices are adopted prior to system implementation.

1. Offer the Customer a Clear Payment Choice

Confusion can often arise when customers believe they're paying using one payment brand, but the transaction is processed using another brand. For example, a customer who selects payment by Visa should always have that choice honored. Options such as “Debit” and “Credit” may be misleading and may have different meanings depending upon the customer’s understanding. Selection of a payment brand provides a clear choice to the consumer. This is why it is best for merchants to provide their customers with a menu of acceptable brands.

- For Internet merchants, providing a menu or radio button that presents all of the payment brand options and allowing the customer to make an informed choice as shown in the example to the right.

- For telephone merchants who instruct customers to select their preferred payment method through a Voice Response Unit (VRU) or customer service agent, it means identifying specific payment brand options, rather than generic terms such as credit, debit, and ATM, and allowing the customer to make an informed choice.

2. Honor the Choice

If the customer indicates that he or she wants to pay with a Visa card, the merchant must make sure that choice is honored. A merchant is allowed to steer the customer to other forms of payment, but cannot confuse or mislead the customer or omit important information in the process. In other words, the choice is ultimately the customer’s. A transaction can only be processed as something other than Visa if the customer has selected another form of payment. However, if a customer chooses Visa, it must be processed as a Visa transaction.

3. Confirm the Choice

To avoid any kind of misunderstanding about the customer’s choice of payment, merchants should include a confirmation page or voice confirmation that specifies the payment option selected (e.g., Visa, Mastercard, Star, etc.).
Dynamic Currency Conversion (DCC) Compliance at the Point of Sale

Dynamic Currency Conversion (DCC) is an optional service, which is facilitated by a merchant at the point of sale with either a third party agent or through its merchant bank. DCC gives a Visa cardholder the choice of whether to pay for goods or services in their billing currency, or in the merchant’s pricing currency.

In a typical DCC transaction, the purchase price is converted from the merchant’s pricing currency into another currency, the “transaction currency.” This is the cardholder’s billing currency. This conversion is performed at the point of sale, before a merchant bank presents the transaction for authorization. The transaction amount is based on a labelled price in the merchant’s pricing currency and converted at a rate agreed upon by the merchant and the cardholder, plus any other charges for currency conversion.

When performed correctly, DCC provides transparency for Visa cardholders. It allows a cardholder to see the transaction amount in his or her billing currency and the merchant’s pricing currency. This way, the cardholder knows exactly how much the goods or services cost, and is able to make value judgments quickly and easily.

With DCC, there are no surprises—the amount agreed and verified by the cardholder using either a PIN or signature at point of sale is exactly the amount charged on the his or her payment card statement.

DCC is currently prohibited for ATM and cash disbursement transactions.
For both a card-present or card-not-present environment, a DCC transaction must contain all of the following:

- Transaction amount of the goods or services purchased in the merchant’s local currency—including currency symbol next to the amount
- Exchange rate, including any commission
- Total price in the transaction currency, accompanied by the words “Transaction Currency”—including currency symbol next to the amount
- A disclaimer that:
  - is easily visible to the cardholder,
  - specifies that the cardholder has been offered a choice of payment in the merchant’s local currency, and that the cardholder understands the choice of currency is final

---

### Truncated Account Number

Visa requires that all new electronic POS terminals provide account number truncation on transaction receipts. This means that only the last four digits of an account number should be printed on the customer’s copy of the receipt.

The expiration date should not appear at all. Existing POS terminals must comply with these requirements. To ensure your POS terminals are properly set up for account number truncation, contact your merchant bank.
Suggested DCC best practices for merchants are as follows:

- Fully disclose to the cardholder that DCC is optional.
- A DCC transaction receipt must not contain misleading text, layout, font sizes or use of text highlighting, that may lead to cardholder confusion or disputes.
- The Transaction Currency and amount should be shown in a larger typeface.
- To aid confirmation of cardholder choice, a cardholder signature may be required to acknowledge cardholder agreement to participation in a DCC transaction. This is in addition to the signature or PIN verification to confirm the transaction and cardholder identity.
- Communication to the cardholder in their local language is advisable, where technically possible, or in English as the default.
- There must be a clear statement that the cardholder recognizes that he or she has been given a choice of currencies.
- There needs to be a clear statement acknowledging that the cardholder’s choice of currency is final. This does not mean the use of the term “No Refunds.”

A DCC merchant:

- Must not use any contractual language or procedures that result in the cardholder choosing DCC transaction by default. The merchant must inform the cardholder that the service is optional.
- Must not convert a transaction amount in a local currency into an amount in a cardholder’s billing currency, after the transaction has been completed, but not yet entered into the Interchange.
- Must not process a contactless “no signature required” or “small ticket” transaction.
SECTION 2 Card-Present Transactions

What’s Covered
- Doing It Right at the Point of Sale
- Visa Card Features and Security Elements
- Authorization
- Signature and Identification
- Suspicious Behavior
- Skimming
- Code 10 Calls
- Recovered Cards
- Electron Cards
- Visa Travelers Cheques

Card-present transactions are those in which both the card and cardholder are present at the point of sale. Merchants associated with this sales environment include traditional retail outlets such as department and grocery stores, electronics stores, and specialty shops and boutiques. Gas stations and other businesses where customers use unattended payment devices are also defined as card-present merchants.

In traditional sales environments, merchants are required to take all reasonable steps to assure that the card, cardholder, and transaction are legitimate. Proper card acceptance begins and ends with sales staff and is critical to customer satisfaction and profitability.
Doing It Right at the Point of Sale

Whether sales associates are experienced or new to the job, if they follow a few basic card acceptance procedures, they will do it right the first time and every time. The illustration below provides an overview of the card acceptance steps that should be followed at the point of sale. Each step is explained in greater detail in this section.

**Illustration of Card Acceptance**

*It Pays to Swipe the Stripe*

On the back of every Visa card, you’ll find a magnetic stripe. It contains the cardholder name, card account number, and expiration date, as well as special security information designed to help detect counterfeit cards. When the stripe is swiped through the terminal, this information is electronically read and relayed to the card issuer, who then uses it as crucial input for the authorization decision.

- **Swipe the card to request the transaction authorization. Hold the card through the entire transaction.**
- **While the transaction is being processed, check the card’s features and security elements to make sure the card is valid and has not been altered in any way.**
- **Obtain authorization and get the cardholder signature on the transaction receipt.**
- **Compare the name, number, and signature on the card to those on the transaction receipt.**
- **If you suspect fraud, make a Code 10 call.**
Verifying the Account Number

Most POS terminals also allow merchants to verify that the account number embossed on the front of the card is the same as the account number encoded on the card’s magnetic stripe. How you check the numbers depends on your POS terminal. In some cases, the magnetic stripe number is displayed on the terminal or printed on the sales receipt. In others, the terminal may be programmed to check the numbers electronically. In such instances, you will be prompted to enter the last four digits of the embossed account number, which will then be matched against the last four digits of the account number on the magnetic stripe.

If the account number is printed on the receipt, in many cases only the last four digits will be used. If the numbers don’t match, you will receive a “No Match” message. In such instances, you should make a Code 10 call.

Visa requires that all new electronic POS terminals provide account number truncation on transaction receipts. This means that only the last four digits of an account number should be printed on the customer’s copy of the receipt, and the expiration date should not appear at all. Existing POS terminals must also comply with these requirements. To ensure your POS terminals are properly set up for account number truncation, contact your merchant bank. (See page 62 for a transaction receipt account number truncation example.)

If a Card Won’t Read When Swiped

In some instances, when you swipe a card, the terminal will not be able to read the magnetic stripe or perform an authorization. When this occurs, it usually means one of three things:

- The terminal’s magnetic-stripe reader is not working properly.
- The card is not being swiped through the reader correctly.
- The magnetic stripe on the card has been damaged or demagnetized. Damage to the card may happen accidentally, but it may also be a sign that the card is counterfeit or has been altered.

If a card won’t read when swiped, you should:

- Check the terminal to make sure that it is working properly and that you are swiping the card correctly.
- If the terminal is okay, take a look at the card’s security features to make sure the card is not counterfeit or has not been altered in any way (see Visa Card Features and Security Elements on page 23).
- If the problem appears to be with the magnetic stripe, follow store procedures. You may be allowed to use the terminal’s manual override feature to key-enter transaction data for authorization, or you may need to make a call to your voice-authorization center.
- For key-entered or voice-authorized transactions, make an imprint of the front of the card. The imprint proves the card was present at the point of sale and protects your business from potential chargebacks if the transaction turns out to be fraudulent. The imprint can be made either on the sales receipt generated by the terminal or on a separate manual sales receipt form signed by the customer.
How to Minimize Key-Entered Transactions

These best practices can help you keep key-entered transactions at acceptably low levels and should be incorporated into your daily operations and staff training and review sessions.

Pinpoint Areas with High Key-Entry Rates

Calculate the percentage of key-entered transactions compared to total transactions to pinpoint which stores, terminals, or sales associates have high key-entry rates. Merchants are encouraged to monitor their key-entry rates on a monthly basis.

To obtain the percentage of key-entered transactions for a particular terminal, divide the total number of key-entered transactions by the total number of sales. Exclude from both totals any mail or telephone orders that may have been made at the terminal. Perform the above calculation for each terminal, and for each sales shift to determine the key-entry rate per sales associate. Repeat the process for each store, as appropriate.

Find Causes and Look for Solutions

If your key-entry rates are greater than one percent per terminal or sales associate, you should investigate the situation and try to find out why. The following chart summarizes the most common reasons for high key-entry rates and provides possible solutions.

<table>
<thead>
<tr>
<th>KEY-ENTRY CAUSE</th>
<th>SOLUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Damaged Magnetic-Stripe Readers</td>
<td>Check magnetic-stripe readers regularly to make sure they are working.</td>
</tr>
<tr>
<td>Dirty Magnetic-Stripe Readers</td>
<td>Clean magnetic-stripe reader heads several times a year to ensure continued good use.</td>
</tr>
<tr>
<td>Magnetic-Stripe Reader Obstructions</td>
<td>Remove obstructions near the magnetic-stripe reader. Electric cords or other equipment could prevent a card from being swiped straight through the reader in one easy movement.</td>
</tr>
<tr>
<td>Spilled Food or Drink</td>
<td>Remove any food or beverages near the magnetic-stripe reader. Falling crumbs or an unexpected spill could soil or damage the machines.</td>
</tr>
<tr>
<td>Anti-Theft Devices that Damage Magnetic Stripes</td>
<td>Keep magnetic anti-theft deactivation devices away from any counter area where customers might place their cards. These devices can erase a card’s magnetic stripe.</td>
</tr>
<tr>
<td>Improper Card Swiping</td>
<td>• Swipe the card once in one direction, using a quick, smooth motion.</td>
</tr>
<tr>
<td></td>
<td>• Never swipe a card back and forth.</td>
</tr>
<tr>
<td></td>
<td>• Never swipe a card at an angle; this may cause a faulty reading.</td>
</tr>
</tbody>
</table>

Key-entered transactions are fully acceptable, but they are associated with higher fraud and chargebacks rates. In addition, when transactions are key-entered, the benefits associated with special security features—such as the expiration date and Card Verification Value 2 (CVV2)—are not available.
Visa Card Features and Security Elements

Every Visa card contains a set of unique design features and security elements developed by Visa to help merchants verify a card’s legitimacy. By knowing what to look for on a Visa card, your sales associates can avoid inadvertently accepting a counterfeit card or processing a fraudulent transaction.

Train your sales staff to take a few seconds to look at the card’s basic features and security elements after they have swiped the card and are waiting for authorization. Checking card features and security elements helps to ensure that the card is valid and has not been altered in any way.

Holding Onto the Card

Sales staff should be instructed to keep payment cards in their possession during transaction processing. Holding onto the card allows time to check card features and security elements and to compare the cardholder signature on the card with the signature on the transaction receipt.

What To Look For On All Visa Cards

The Signature Panel has an updated tamper evident design, as shown here, or has a custom design. It may vary in length dependent on card type.

If someone has tried to erase the signature panel, the word “VOID” will be displayed.

The Mini Dove Design Hologram may appear on the back anywhere within the outlined areas shown in these images. A three-dimensional dove hologram should reflect light and seem to change as you tilt the card. Most counterfeit cards contain a one-dimensional printed image on a foil sticker.

Embossed or Printed Account Number on valid cards begins with “4.” The account number must be even and straight; on altered cards, they may have fuzzy edges, or you may be able to see “ghost images” of the original numbers.

Always request authorization on an expired card. If the card issuer approves the transaction, proceed with the sale. Never accept a transaction that has been declined.

Card Verification Value (CVV2) is a three-digit code that appears either on the signature panel or on a white box to the right of the signature panel. Portions of the account number may also be present on the signature panel. CVV2 is used primarily in card-not-present transactions to verify that the customer is in possession of a valid Visa card at the time of the sale.

The magnetic stripe is encoded with the card’s account number, expiration date, and other identifying information.

Visa Brand Mark appears in blue and gold on a white background. It must appear in either the bottom right, top left, or top right corner.

Ultraviolet “V” is visible over the Visa Brand Mark when placed under an ultraviolet light.

Four-Digit Number must be printed directly below the account number. This four-digit number must match exactly with the first four digits of the account number. Both must begin with a “4.”

“Good Thru” (or “Valid Thru”) Date is the expiration date of the card. It is located below the embossed account number. If the current transaction date is after the “Good Thru” date, the card has expired.

Visa Mini Dove Design hologram on Back of Card

Always request authorization on an expired card. If the card issuer approves the transaction, proceed with the sale. Never accept a transaction that has been declined.
SECTION TWO: CARD-PRESENT TRANSACTIONS

Cards with Visa Holographic Magnetic Stripe on Back of Card

The Signature Panel has an updated tamper evident design, as shown here, or has a custom design.

The holographic Magnetic Stripe should have a ring around the sun when the card is moved from side-to-side. The word “VISA” should appear in the center of the sun when the card is tilted.

If someone has tried to erase the signature panel, the word “VOID” will be displayed.

Embosed or Printed Account Number on valid cards begins with “4.” The account number must be even and straight; on altered cards, they may have fuzzy edges, or you may be able to see “ghost images” of the original numbers.

Card Verification Value (CVV2) is a three-digit code that appears either on the signature panel or on a white box to the right of the signature panel. Portions of the account number may also be present on the signature panel. CVV2 is used primarily in card-not-present transactions to verify that the customer is in possession of a valid Visa card at the time of the sale.

Four-Digit Number must be printed directly below the account number. This four-digit number must match exactly with the first four digits of the account number. Both must begin with a “4.”

CVV2 is used primarily in card-not-present transactions to verify that the customer is in possession of a valid Visa card at the time of the sale.

“Good Thru” (or “Valid Thru”) Date is the expiration date of the card. It is located below the embossed account number. If the current transaction date is after the “Good Thru” date, the card has expired.

If someone has tried to erase the signature panel, the word “VOID” will be displayed.

Visa Brand Mark appears in blue and gold on a white background. It must appear in either the bottom right, top left, or top right corner.

Cards with Dove Design Hologram on Front of Card

The magnetic stripe is encoded with the card’s account number, expiration date, and other identifying information.

If someone has tried to erase the signature panel, the word “VOID” will be displayed.

The Signature Panel has an updated tamper evident design, as shown here, or has a custom design.

Embosed or Printed Account Number begins with 4. All digits must be clear, even, and the same size/shape. If a card has been re-embossed, the numbers may appear fuzzy. As a general rule of thumb—always check the hologram. It is easier to spot a re-embossed number there.

Card Verification Value (CVV2) is a three-digit code that appears either on the signature panel or on a white box to the right of the signature panel. Portions of the account number may also be present on the signature panel. CVV2 is used primarily in card-not-present transactions to verify that the customer is in possession of a valid Visa card at the time of the sale.

Four-Digit Number must be printed directly below the account number. This four-digit number must match exactly with the first four digits of the account number. Both must begin with a “4.”

“Good Thru” (or “Valid Thru”) Date is the expiration date of the card. It is located below the embossed account number. If the current transaction date is after the “Good Thru” date, the card has expired.

Visa Brand Mark appears in blue and gold on a white background. It must appear in either the bottom right, top left, or top right corner.

Flying Dove Hologram should appear to be three-dimensional and appear to move when the card is tilted back and forth.
When Something Doesn’t Look Right

If any of the Visa card security features is missing or looks altered, keep the card in your possession and make a Code 10 call to your authorization center. You may be instructed to try to recover the card or simply to return it to the cardholder and decline the transaction (see Code 10 Calls on page 33).
## Authorization

The authorization process allows the card issuer to approve or decline a transaction. In most cases, authorizations are processed electronically in a matter of moments. However, to protect against fraud, the card issuer may request additional information about the transaction.

If properly done, authorizing a transaction is quick and easy, and protects merchants against fraud and chargebacks.

### Authorization Responses

During the authorization process, your sales associates should receive one of the following responses, or one that is similarly worded.

<table>
<thead>
<tr>
<th>RESPONSE</th>
<th>MEANING</th>
</tr>
</thead>
<tbody>
<tr>
<td>Approved</td>
<td>Card issuer approves the transaction. This is the most common response—about 95% of all authorization requests are approved.</td>
</tr>
<tr>
<td>Declined or Card Not Accepted</td>
<td>Card issuer does not approve the transaction. The transaction should not be completed. Return the card and instruct the cardholder to call the card issuer for more information on the status of the account.</td>
</tr>
<tr>
<td>Call, Call Center, or Referrals</td>
<td>Card issuer needs more information before approving the sale. Most of these transactions are approved, but you should call your authorization center and follow whatever instructions you are given. In most cases, an authorization agent will ask to speak directly with the cardholder or will instruct you to check the cardholder’s identification.</td>
</tr>
<tr>
<td>Pick Up</td>
<td>Card issuer wants to recover the card. Do not complete the transaction. Inform the customer that you have been instructed to keep the card, and ask for an alternative form of payment. If you feel uncomfortable, simply return the card to the cardholder (see Card Recovery Procedures on page 34).</td>
</tr>
<tr>
<td>No Match</td>
<td>The embossed account number on the front of the card does not match the account number encoded on the magnetic stripe. Swipe the card again and re-key the last four digits at the prompt. If a “No Match” response appears again, it means the card is counterfeit. If it can be done safely, keep the card in your possession, and make a Code 10 call.</td>
</tr>
</tbody>
</table>

When a transaction is approved, the POS terminal automatically prints a sales receipt. When a negative or alert message is received, the response is displayed on the POS terminal, and no sales receipt is printed. Whatever the message, you should continue to treat the customer courteously so as not to arouse alarm or suspicion.
SECTION TWO: CARD-PRESENT TRANSACTIONS

**Zero-Percent Tip Authorizations**

Merchants should not estimate transaction amounts. For restaurant, taxicabs, limousines, bars, taverns, beauty/barber shops, health/beauty spa merchants, in particular, this means debit or credit card transactions should be authorized only for the known amount of the check. **Do not add on an estimated tip.**

Cardholders today can check their account balances almost instantly via the Internet or ATMs. An authorization that includes an estimated tip can reduce their available cash or credit balance by an unrecognizable amount. Say, for example, a cardholder’s restaurant bill is $100, but the staff adds on a 20 percent tip—that is, $20—for authorization purposes. If the cardholder only adds on a $15 tip, or leaves the tip in cash, the authorization “hold” on the larger amount may make it appear he or she was overcharged. And that, in turn, can mean angry phone calls from unhappy customers—and the potential for reduced business.

To ensure zero-percent tip authorization for all transactions, taxicabs, limousines, bars, taverns, beauty/barber shops, health/beauty spas, and restaurant merchants should:

- **Instruct staff to authorize only for the check amount.** Your staff training and review materials should emphasize the importance of authorizing only for the known amount of the check, excluding any estimated tip.

- **Ensure your authorization system is set up for zero-percent authorization.** Check with your POS terminal provider to ensure that your terminals are programmed to authorize only for the known check amount.

For further information on zero-percent tip authorization, contact your merchant bank.

**Chargeback Protection**

Taxicabs, limousines, bars, taverns, beauty/barber shops, health/beauty spas, and restaurant authorizations are automatically valid for the transaction amount plus 20 percent to protect merchants from chargeback liability for an incorrect or disputed transaction amount.

**Split-Tender Transactions**

A split-tender transaction occurs when a cardholder purchases goods or services with a Visa card plus some other form of payment, or tender, such as cash or check or another Visa card. Merchants set their own policies on whether or not to accept split-tender transactions. Make sure that your sales staff knows your policy.

**Partial Authorizations**

Partial Authorization provides an alternative to a declined transaction by permitting a prepaid card issuer to return an authorization approval for a partial amount, an amount less than the transaction amount requested by the merchant, when the available card balance is not sufficient to approve the transaction in full. The cardholder is able to use up the remaining funds on the Visa card and select another form of payment (e.g., another payment card, cash, check) for the remaining balance of the transaction.

Partial Authorization benefits all stakeholders, including improved cardholder satisfaction at the point of sale and increased sales.

For further information on Partial Authorizations, contact your merchant bank.
Signature and Identification

The final step in the card acceptance process is to ensure that the customer signs the sales receipt and to compare that signature with the signature on the back of the card. When signing the receipt, the customer should be within your full view, and you should check the two signatures closely for any obvious inconsistencies in spelling or handwriting.

While checking the signature, you should also compare the name, account number, and signature on the card to those on the transaction receipt.

- Match the name and last four digits of the account number on the card to those printed on the receipt.

For suspicious or non-matching signatures, make a Code 10 call and ask for further instructions. Note: If the transaction is accepted with a non-matching signature and it turns out to be fraudulent, your business may be liable, even if all other procedures were followed.

For more information on how to make a Code 10 call, refer to page 33.
Unsigned Cards

While checking card security features, you should also make sure that the card is signed. An unsigned card is considered invalid and should not be accepted. If a customer gives you an unsigned card, the following steps must be taken:

- Check the cardholder’s ID. Ask the cardholder for some form of official government identification, such as a driver’s license or passport. Where permissible by law, the ID serial number and expiration date should be written on the sales receipt before you complete the transaction.

- Ask the customer to sign the card. The card should be signed within your full view, and the signature checked against the customer’s signature on the ID. A refusal to sign means the card is still invalid and cannot be accepted. Ask the customer for another signed Visa card.

- Compare the signature on the card to the signature on the ID.

If the cardholder refuses to sign the card, and you accept it, you may end up with financial liability for the transaction should the cardholder later dispute the charge.

“See ID”

Some customers write “See ID” or “Ask for ID” in the signature panel, thinking that this is a deterrent against fraud or forgery; that is, if their signature is not on the card, a fraudster will not be able to forge it. In reality, criminals don’t take the time to practice signatures: they use cards as quickly as possible after a theft and prior to the accounts being blocked. They are actually counting on you not to look at the back of the card and compare signatures—they may even have access to counterfeit identification with a signature in their own handwriting.

“See ID” or “Ask for ID” is not a valid substitute for a signature. The customer must sign the card in your presence, as stated above.

Requesting Cardholder ID

When should you ask a cardholder for an official government ID? **Although Visa rules do not preclude merchants from asking for cardholder ID, merchants cannot make an ID a condition of acceptance. Therefore, merchants cannot refuse to complete a purchase transaction because a cardholder refuses to provide ID. Visa believes merchants should not ask for ID as part of their regular card acceptance procedures.** Laws in several states also make it illegal for merchants to write a cardholder’s personal information, such as an address or phone number, on a sales receipt.

For more information on how to make a Code 10 call, refer to page 33.

If you are suspicious about the transaction or feel you need additional information to insure the identity of the cardholder, make a Code 10 call.
Cash Disbursements

Generally, merchants are prohibited from making cash disbursements. Financial institutions (for example, bank branches) may disburse cash. For these transactions, you must ask for an official government ID, and where permitted by law, you must also write the ID number and expiration date on the sales receipt. The printed four-digit number from the front of the card must also be recorded.
Suspicious Behavior

In addition to following all standard card acceptance procedures, you should be on the lookout for any customer behavior that appears suspicious or out of the ordinary.

**At the Point of Sale**

- Purchasing large amounts of merchandise with seemingly no concern for size, style, color, or price
- Asking no questions or refusing free delivery on large items (for example, heavy appliances or televisions) or high-dollar purchases
- Trying to distract or rush sales associates during a transaction
- Making purchases, leaving the store, and then returning to make more purchases
- Making purchases either right when the store opens or just before it closes

Of course, peculiar behavior should not be taken as automatic proof of criminal activity. Use common sense and appropriate caution when evaluating any customer behavior or other irregular situation that may occur during a transaction. You know what kind of behavior is normal for your particular place of business.

If you feel really uncomfortable or suspicious about a cardholder or transaction, keep the card in your possession and make a Code 10 call. In any situation where making the call with the customer present feels inappropriate or unsafe, complete the transaction, return the card, and make the call immediately after the customer leaves.

**At Service Stations**

With their mix of attended and unattended POS devices, service stations are somewhat different from traditional retail environments. Customer behavior that signals potential fraud is also different here, both at the counter and at the pump.

<table>
<thead>
<tr>
<th>AT THE COUNTER</th>
<th>AT THE PUMP</th>
</tr>
</thead>
<tbody>
<tr>
<td>Buying more than $50 worth of convenience store items</td>
<td>Activating multiple pumps</td>
</tr>
<tr>
<td>Buying large amounts of beer and cigarettes</td>
<td>Buying gas several times a day</td>
</tr>
<tr>
<td>Buying tires and not needing them mounted</td>
<td>Filling multiple cars on the same pump</td>
</tr>
<tr>
<td>Attempting to bribe a cashier</td>
<td>Filling large containers</td>
</tr>
<tr>
<td>Asking for cash back with a credit card</td>
<td>Testing cards</td>
</tr>
<tr>
<td></td>
<td>Loitering at the pumps</td>
</tr>
</tbody>
</table>
Skimming

Skimming is a fraud scam in which a cardholder’s account information is electronically copied, or “skimmed,” off the card’s magnetic stripe, often in the process of an otherwise valid transaction. The skimmed information is used to produce counterfeit payment cards that are, in turn, used for fraudulent transactions.

Skimming often occurs in card-present environments, such as restaurants and service stations, where transaction processing may occur out of sight of the cardholder. To skim a card, fraudsters typically use a small portable device that may not be bigger than a pager. They swipe the card through the device to copy the magnetic stripe.

To prevent skimming, you should be on the lookout for:

• Anyone operating an electronic device not normally used in your day-to-day business activities
• Anyone offering you money to record account information

If you suspect skimming activity at your place of business, you should call your merchant bank or company security immediately.
Code 10 Calls

Code 10 calls allow merchants to alert card issuers to suspicious activity and take appropriate action when instructed to do so. You should make a Code 10 call to your voice authorization center whenever you are suspicious about a card, cardholder, or a transaction. The term “Code 10” is used so the call can be made at any time during a transaction without arousing a customer’s suspicions.

To make a Code 10 call:

- Keep the card in your possession during the call.
- Call your voice authorization center, and say, “I have a Code 10 authorization request.”

The call may first be routed to a representative at your merchant bank who may need to ask you for some merchant or transaction details. You will then be transferred to the card issuer and connected to a special operator who will ask you a series of questions that can be answered with a simple yes or no.

- When connected to the special operator, answer all questions calmly and in a normal tone of voice. Your answers will be used to determine whether the card is valid.
- Follow all operator instructions.
- If the operator tells you to pick up the card, do so only if recovery is possible by reasonable and peaceful means.

Making Code 10 Calls After a Transaction

Sometimes a sales associate may not feel comfortable making a Code 10 call while the cardholder is at the point of sale, or the sales associate may become suspicious of a cardholder who has already left the store.

Emphasize to your sales staff that they can make Code 10 calls even after a cardholder leaves the store. A Code 10 alert at this time may help stop fraudulent card use at another location, or perhaps during a future transaction at your store.
Recovered Cards

In general, you should recover a card if you have reasonable grounds for believing the card is being used fraudulently or is altered or counterfeit. The following situations are considered reasonable grounds for recovery:

- Card security features are missing or irregular, or appear to have been tampered with (see Visa Card Features and Security Elements on page 23).
- The account number on the magnetic stripe does not match the number embossed on the front of the card (see Doing It Right at the Point of Sale on page 20).
- You receive a pick-up response when a card has been swiped for electronic authorization, or you are instructed to recover the card during a Code 10 call.

Card Recovery Procedures

The following card recovery procedures apply to all Visa credit, debit, and Electron cards.

- Recover the card only if you can do so safely. Never take unnecessary risks.
- Tell the cardholder you have been instructed to keep the card, and that he or she may call the card issuer for more information.
- Remain calm and courteous. If the cardholder behaves in a threatening manner, return the card immediately.
- Following a successful recovery, call your merchant bank and ask for further instructions.
- Cut the card in half lengthwise, being careful not to damage the dove hologram, the embossed account number, or magnetic stripe.
- Send the card pieces directly to your merchant bank.

For cards that are inadvertently left at a merchant location and remain unclaimed, follow the procedures for contacting your merchant bank and sending in the card.

Cash Rewards

Cash rewards are available to merchants and their employees for recovering counterfeit or other fraudulent cards, or for information leading to the arrest and conviction of any person or persons involved in a counterfeit scheme. Eligibility for specific rewards is as follows:

For Recovered Cards

- **$50 rewards**: A reward of not less than $50 will be paid for any card you recover after receiving a pick-up response to an authorization request.
- **$100 rewards**: A $100 reward is paid for cards recovered as a result of a Code 10 call, or if you determine that the first four digits of the embossed account number on a card do not match the four-digit printed number.
For Counterfeit Information

- **$1,000 rewards**: A reward of up to $1,000 will be paid for information leading to the arrest and conviction of any person using or causing a counterfeit card to be used.

**Eligibility**

To be eligible for a reward, you must comply with all card-recovery procedures. If a law enforcement agency keeps the recovered card, you must provide a legible copy of the front and back of the card to your merchant bank.
Electron Cards

The Visa Electron card is a type of debit or prepaid card owned and managed by Visa International and issued in countries around the world. The card is currently not issued in the United States but is accepted at many U.S. merchant locations. Like a Visa check card, the Electron card provides consumers with direct access to deposit account funds, but the card’s security features and acceptance procedures are slightly different.

First, the account number on the front of an Electron card is printed, not embossed. The card also has an Electron symbol in place of the Visa dove hologram and the word “Electron,” rather than “Visa,” in the pattern on the signature panel. The full 16-digit account number may not be present on the front of the card. At the discretion of the card issuer, Electron cards may bear only the first and last four digits of the account number. At the discretion of the card issuer, Electron cards may be used for mail order, telephone order, or Internet purchases, or for cash advances or any other type of cash disbursement.

Electronic authorization is required for all Electron card transactions. This means you must be able to perform the authorization by swiping the card through a POS terminal. Key-entered authorizations are not allowed. If the magnetic stripe is damaged or cannot be read by the terminal, the card cannot be used.
Visa Travelers Cheques

Many card-present merchants also accept Visa Travelers Cheques. Visa recommends the following cheque acceptance procedures.

- Examine the cheque. Look for the key security features.
  - **Paper.** Should feel like currency. A counterfeit cheque will feel smoother or thicker.
  - **Visa Dove Watermark.** Should be visible on the front of the cheque when it is lifted to light. A counterfeit cheque will either not have a watermark, or it will be on the back rather than the front.
  - **Engraved printing.** Should have a raised texture to the touch. Engraved elements on a travelers cheque include the primary denomination indicator, the cheque border, and the cheque’s portrait. A counterfeit cheque will usually have a uniformly flat surface.
  - **Silver holographic bands.** Should be to the right of Visa symbol. When the cheque is tilted, the color in the bands will appear to change; the bands also have a repeat pattern with the word “secure” in them. If the color of the bands appears black, the cheque may be counterfeit.
  - **Security inks.** Should have multicolored background pattern, with the word “Visa,” and the currency and denomination included. Any attempt to alter the signature or countersignature areas will result the smudging or disappearance of the background pattern.

- Watch the customer countersign each cheque on the lower left-hand signature line.

- Compare the countersignature with the signature on the upper right-hand signature line. In the case of dual-signature cheques, the countersignature must match one of the two original signatures in the upper right. In either case, if the signatures do not match, ask the customer to countersign the check again, on the reverse side, and ask for a photo ID.

- If you receive a cheque that is already countersigned, ask the customer to sign it on the back and request a photo ID.

- If you are suspicious about any cheque or the customer using it, call Visa’s toll-free number, 1-800-227-6811, for verification and further instructions. Try to retain the cheque and customer ID, if possible, by peaceful means. If a customer becomes abusive or threatening, return the cheque and ID immediately.
SECTION 3  Card-Not-Present Transactions

What's Covered

- Fraud Prevention Guidelines for Card-Not-Present Transactions
- Additional Fraud Prevention Tools for the Internet
- Suspicious Transactions
- Recurring Transactions

The growth of the mail order, telephone order (MO/TO), and Internet markets means increasing numbers of merchants are now processing transactions in situations where the card and cardholder are not present—and fraud may be especially difficult to detect. Of necessity, card acceptance procedures for these transactions are different from procedures for card-present transactions, but must still allow merchants to verify—to the greatest extent possible—the cardholder’s identity and the validity of the purchase.

This section covers basic card acceptance procedures for both MO/TO and Internet merchants. It also includes resources and best practices that all card-not-present merchants can use to prevent fraud and chargebacks.
Fraud Prevention Guidelines for Card-Not-Present Transactions

Visa has established a range of fraud-prevention policies, guidelines, and services for card-not-present merchants. Using these tools will help protect your business from fraud-related chargebacks and losses. MO/TO and Internet merchants should strongly consider developing in-house fraud control policies and providing appropriate training for their employees.

The following sections outline basic fraud-prevention guidelines and best practices for card-not-present merchants.

Authorize All Card-Not-Present Transactions

Authorization is required on all card-not-present transactions. Card-not-present transactions are considered as zero-floor-limit sales. Authorization should occur before any merchandise is shipped or service performed.

Ask for Card Expiration Date

Whenever possible, card-not-present merchants should ask customers for their card expiration, or “Good Thru,” date and include it in their authorization requests.

Including the date helps to verify that the card and transaction are legitimate. A MO/TO or Internet order containing an invalid or missing expiration date may indicate counterfeit or other unauthorized use.

Ask for CVV2

The Card Verification Value 2 (CVV2) is a three-digit security number printed on the back of Visa cards to help validate that a customer is in possession of a legitimate card at the time of an order. (See Visa Card Features and Security Elements on page 23.)

Studies show that merchants who include CVV2 validation in their authorization procedures for card-not-present transactions can reduce their fraud-related chargebacks.

CVV2 Processing

To ensure proper CVV2 processing for card-not-present transactions, merchants should:

- Ask card-not-present customers for the last three numbers in or beside the signature panel on the back of their Visa cards.
If the customer provides a CVV2, submit this information with other transaction data (card expiration date and account number) for electronic authorization. You should also include one of the following CVV2 presence indicators, even if you are not including a CVV2 in your authorization request:

<table>
<thead>
<tr>
<th>INDICATOR</th>
<th>WHAT IT MEANS</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>CVV2 is not included in authorization request.</td>
</tr>
<tr>
<td>1</td>
<td>CVV2 is included in authorization request.</td>
</tr>
<tr>
<td>2</td>
<td>Cardholder has stated that CVV2 is illegible.</td>
</tr>
<tr>
<td>9</td>
<td>Cardholder has stated that CVV2 is not on the card.</td>
</tr>
</tbody>
</table>

Evaluate the CVV2 result code you receive with the transaction authorization, and take appropriate action based on all transaction characteristics.

<table>
<thead>
<tr>
<th>CVV2 RESULT CODE</th>
<th>RECOMMENDED ACTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>M - Match</td>
<td>Complete the transaction, taking into account all other transaction characteristics and verification data.</td>
</tr>
<tr>
<td>N - No Match</td>
<td>View a “No Match” response as a sign of potential fraud, which should be taken into account along with the authorization response and any other verification data. You may also want to resubmit the CVV2 to ensure a key-entry error did not occur.</td>
</tr>
<tr>
<td>P - CVV2 request not processed</td>
<td>Resubmit the authorization request.</td>
</tr>
<tr>
<td>S - CVV2 should be on the card, but the cardholder has reported that it isn’t.</td>
<td>Follow up with the customer to verify that the correct card location has been checked for CVV2.</td>
</tr>
<tr>
<td>U - card issuer does not support CVV2</td>
<td>Evaluate all available information and decide whether to proceed with the transaction or to investigate further.</td>
</tr>
</tbody>
</table>

A cardholder’s CVV2 may never be stored as a part of order information or customer data. The storage of CVV2 is strictly prohibited subsequent to authorization.

Verify the Billing Address with AVS

The Address Verification Service (AVS) is an automated fraud prevention tool that allows card-not-present merchants to check a cardholder’s billing address as part of the electronic authorization process. Studies have shown that perpetrators of fraud in card-not-present transactions often do not know the correct billing address for the account they are using. Verifying the address can, therefore, provide merchants with another key indicator of whether or not a transaction is valid.
AVS Processing

To use AVS, simply ask card-not-present customers for their billing address as it appears on their monthly statement. This information is then submitted with other transaction data for electronic authorization. Address verification and authorization occur simultaneously—in a matter of seconds—and you will receive an AVS response code with the authorization.

You should evaluate the AVS response code and take appropriate action, based on all transaction characteristics and any other verification information received with the authorization (expiration date, CVV2, etc.). An authorization response always takes precedence over AVS. Do not accept any transaction that has been declined, regardless of the AVS response.

<table>
<thead>
<tr>
<th>AVS RESPONSE</th>
<th>WHAT IT MEANS</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Y – Match</strong></td>
<td>Both street address and five-digit zip code match. Complete the transaction; you can be relatively confident it is legitimate.</td>
</tr>
<tr>
<td><strong>A – Partial Match</strong></td>
<td>Street address matches, but zip code doesn’t. View as a sign of potential fraud. Depending on the transaction amount, you may decide to complete the transaction or investigate further to ensure it is valid.</td>
</tr>
<tr>
<td><strong>Z – Partial Match</strong></td>
<td>Zip code matches but the street address doesn’t. View as a sign of potential fraud. Depending on the transaction amount, you may decide to complete the transaction or investigate further to ensure it is valid. Unless you sent only a zip code AVS request and it matched, you may want to follow up before shipping merchandise. Note: A zip code only request and P.O. Box address, issuers may respond with either a “Y” (Exact Match), or a “Z” (Partial match-zip Code Matches).</td>
</tr>
<tr>
<td><strong>N – No Match</strong></td>
<td>Street address and zip code don’t match. View as a sign of potential fraud and take further steps to validate the transaction.</td>
</tr>
<tr>
<td><strong>U – Unavailable</strong></td>
<td>The card issuer’s system is not available, or the card issuer does not support AVS. The address cannot be verified at present. You must decide whether to accept or refuse the transaction, or investigate further.</td>
</tr>
<tr>
<td><strong>R – Retry</strong></td>
<td>The card issuer’s system is not available; try again later. The card issuer’s system may not be working. You should resubmit your AVS request later.</td>
</tr>
</tbody>
</table>

If you a complete a transaction for which you received an authorization approval and an AVS response of “U” (unavailable), and the transaction is later charged back to you as fraudulent, your merchant bank may represent the item. U.S. issuers must support AVS or lose their right to fraud chargebacks for card-not-present transactions.

Issuers also lose fraud chargeback rights for “U” responses in CVV2 request situations.
International Addresses

AVS can only be used to confirm addresses in the United States, unless a card issuer supports International AVS. If you submit an address outside the U.S., you will receive the response message “G” for “Global.” In such cases, you should take further steps to verify the address. You will be liable for any chargebacks if you accept the transaction, even if the card issuer approves it.

Merchant Direct Access Service (MDAS)

The Merchant Direct Access Service (MDAS) offers merchants access to AVS by a toll-free number, using a touch-tone phone. The service is specifically targeted to small MO/TO or Internet merchants for whom AVS may not be cost-effective. Merchants using MDAS are charged on a per-transaction basis.

To use MDAS, you need a touch-tone phone with an outgoing line and a Merchant Access Code (MAC), which you get from your merchant bank. To request an address verification, call the MDAS toll-free number, 1-800-VISA-AVS (1-800-847-2287). An automated voice unit guides you through the process of submitting a customer’s account number and address, and gives you the results of the verification.

MDAS responses are similar to AVS, but do not include a single-letter response code.

<table>
<thead>
<tr>

</tr>
<tr>
<td>Partial Match</td>
<td>Zip code matches, but not street address.</td>
</tr>
<tr>
<td>No Match</td>
<td>Neither street address nor zip code matches.</td>
</tr>
<tr>
<td>Retry Later</td>
<td>Card issuer system is not available at present.</td>
</tr>
<tr>
<td>Global</td>
<td>International address; cannot be verified.</td>
</tr>
</tbody>
</table>

Internet Transactions

Today, more and more merchants are joining the “click and mortar” market, adding online sales to their traditional card-present operations. As a result, Visa has developed guidelines and fraud prevention services especially for the web.
Your merchant bank may recommend or require that you include certain content or features on your web site. These elements are intended to promote ease of use for online shoppers and reduce cardholder disputes and potential chargebacks.

- **Complete description of goods and services.** Remember you have a global market, which increases opportunities for unintended misunderstandings or miscommunications. For example, if you sell electrical goods, be sure to state voltage requirements, which vary around the world.

- **Customer service contact information, including e-mail address or phone number.** Online communication may not always be the most time-efficient or user-friendly for some customers. Including a customer service telephone number as well as e-mail address promotes customer satisfaction.

- **Return, refund, and cancellation policy.** This policy must be clearly posted. (See Disclosure for Card-Not-Present Merchants on page 14.)

- **Delivery policy.** Merchants set their own policies about delivery of goods, that is, if they have any geographic or other restrictions on where or under what circumstances they provide delivery. Any restrictions on delivery must be clearly stated on the web site.

- **Country of origin.** You must disclose the permanent address of your establishment on the web site. Check with your merchant bank to ensure your disclosure is made in accordance with the Visa U.S.A. Inc. Operating Regulations and local law.

- **Export restrictions (if known).**

**Best Practices for the Web**

Suggested best practices for merchant web sites include:

- **Privacy statements.**

- **Information on when credit cards are charged.** You should not bill the customer until merchandise has been shipped.

- **Order-fulfillment information.** State timeframes for order processing and send an e-mail confirmation and order summary within one business day of the original order. Provide up-to-date stock information if an item is back-ordered.

- **Customer service timeframes.** Ideally customer service e-mails or phone calls should be answered within two business days.

- **A statement on web site regarding security controls used to protect customers.**

- **A statement encouraging cardholders to retain a copy of the transaction.**
Additional Fraud-Prevention Tools for the Internet

Today’s e-commerce merchant has many options for combating payment card fraud. To protect your business, you need to build a reliable risk management system. Visa continues to develop online fraud-prevention tools to complement your own internal fraud avoidance efforts.

Verified by Visa

Verified by Visa is an online, real-time service that allows e-commerce merchants to validate that a cardholder is the owner of a specific account number.

The service is free to cardholders, who register their account numbers online at Visa’s consumer web site, www.usa.visa.com. Each cardholder creates a unique password at the time of registration. Then when a cardholder makes a purchase by clicking Buy, or a similar button, on a participating merchant web site, the merchant server recognizes the Visa account number and a Verified by Visa window appears. The cardholder is prompted to enter the password. The password is forwarded to the cardholder’s card issuer, who confirms the cardholder’s identity and the Visa account number.

Following confirmation, the Verified by Visa window disappears and the consumer is returned to the checkout screen. If the cardholder is not confirmed, an error message appears.

Fraud Screening

Today, a wide variety of fraud-screening services and practices are available to help Internet merchants assess the risk of a transaction and, in some cases, suspend processing if high-risk attributes are found. You are encouraged to develop your own internal fraud-screening programs or consider using a third-party screening service, such as CyberSource Advanced Fraud Screen Enhanced by Visa.

An effective fraud-screening program will suspend processing if a transaction:

- Matches data stored in your internal negative files.
- Exceeds velocity limits and controls.
- Generates an AVS mismatch or CVV2 no match.
- Matches other high-risk attributes. For example, transactions associated with anonymous e-mail addresses, high-risk shipping addresses, or cards issued outside the United States are considered high-risk.
You should also develop cost-effective and timely review procedures for investigating high-risk transactions. In particular, your screening criteria should help you to avoid manual review of transactions where fraud loss would be less than the cumulative costs of screening and investigation.

**Identify low-risk transactions.** For many merchants, obtaining third-party fraud scores for each and every transaction may not be cost-effective. You can minimize costs by identifying low-risk transactions—those with potential losses that are less than the cost of scoring—and eliminating them from the scoring process.

**CyberSource Advanced Fraud Screen Enhanced by Visa**

CyberSource Advanced Fraud Screen Enhanced by Visa is real-time risk management tool that evaluates the risk associated with individual transactions and provides merchants with risk scores. You use the scores as an additional means to identify potentially fraudulent orders.

Every time a cardholder clicks the Buy button on a web site using CyberSource Advanced Fraud Screen, the transaction is evaluated based on over 150 data points. Running 24 hours a day, seven days a week, the service uses the world’s largest database of global fraud and payment-card usage patterns, including online and offline transactions, and is updated frequently. Risk scores are calculated using a combination of neural networks, rules-based modeling, and Visa hybrid fraud technologies.
Suspicious Transactions

Card-not-present merchants should develop in-house policies and procedures for handling irregular or suspicious transactions and provide appropriate training for their sales staff. Being able to recognize suspicious orders may be particularly important for merchants involved in telephone sales, and employees should be given clear instructions on the steps to take to verify these transactions.

Your sales employees should be on the lookout for any of the following signs of suspicious customer behavior:

- **Hesitation**: Beware of customers who hesitate or seem uncertain when giving you personal information, such as a zip code or the spelling of a street or family name. This is often a sign that the person is using a false identity.

- **Rush orders**: Urgent requests for quick or overnight delivery—the customer who “needs it yesterday”—should be another red flag for possible fraud. While often perfectly valid, rush orders are one of the common characteristics of “hit and run” fraud schemes aimed at obtaining merchandise for quick resale.

- **Random orders**: Watch out also for customers who don’t seem to care if a particular item is out of stock—“You don’t have it in red? What colors do you have?”—or who order haphazardly—“I’ll take one of everything!” Again, orders of this kind may be intended for resale rather than personal use.

- **Suspicious shipping address**: Scrutinize and flag any order with a ship-to address that is different from the billing address on the cardholder’s account.
  - Requests to ship merchandise to post office boxes or an office address are often associated with fraud.
  - Keep lists of zip codes where high fraud rates are common and verify any order that has a ship-to address in these areas.
  - If your business does not typically service foreign customers, use caution when shipping to addresses outside the United States, particularly if you are dealing with a new customer or a very large order.

In examining what appears to be an unusual order, keep in mind that if the sale sounds too good to be true, it probably is.
Experience suggests that Internet orders with certain characteristics can be tip-offs to possible fraud. Suspicious online transactions are similar to suspicious sales in other card-not-present environments, although the Internet offers additional opportunities for “virtual” scams. The following list of potential fraud characteristics—compiled from the advice of various experts—is offered to help you avoid being victimized by Internet fraud. An Internet transaction with any one of these characteristics by itself is seldom cause for alarm; however, a transaction with several potential risk markers may mean you are the target of a fraud scheme.

Characteristics to watch out for include:

- **First-time shopper:**
  Criminals are always looking for new victims. They usually hit a merchant once and don’t go back a second or third time.

- **Larger-than-normal orders:**
  Because stolen cards or account numbers have a limited life span, crooks need to maximize the size of their purchases. Of course, the size of “normal” orders vary from merchant to merchant.

- **Orders consisting of several of the same item:**
  Having multiples of the same item increases criminals’ profits.

- **Orders made up of big-ticket items:**
  These items have maximum resale value and therefore maximum profit potential.

- **Orders shipped “rushed” or “overnight”:**
  Crooks aren’t concerned about extra delivery charges. They want their fraudulently obtained items as soon as possible for the quickest possible resale.

- **Orders from Internet addresses at free e-mail services:**
  These services have no billing relationships with their users, which in turn means no audit trail or verification that a legitimate cardholder has opened the account.

- **Orders shipped to an International address:**
  A significant number of fraudulent transactions are shipped to fraudulent cardholders outside of the United States. AVS can validate addresses in the United Kingdom, but other non-U.S. addresses cannot be verified.
The next several characteristics are ones that require regular monitoring of your company’s transactions. Ideally, you should have a database or account history files against which to compare individual sales for possible fraud.

- **Transactions on similar account numbers**: Fraudsters often use account numbers that have been generated with software available on the Internet, such as CreditMaster.

- **Orders made on multiple cards but shipped to a single address**: These orders can also be characteristic of a software-generated account number or may have been made using a batch of stolen cards.

- **Multiple transactions on one card over a very short period of time**: Criminals often attempt to run up purchases on a single card until the account is closed.

- **Multiple shipping addresses**: In a similar fraud scenario, multiple transactions are charged to one card or similar cards that have a single billing address but multiple shipping addresses. This situation could be a sign of some organized activity, rather than one individual at work.

- **Multiple cards from a single IP address**: The Internet Protocol (IP) address identifies the computer in a network from which an order has been made. In this instance, fraud indicators may include multiple orders using different names, addresses, and card numbers, but coming from one IP address.

**What To Do If You’re Suspicious**

Card-not-present merchants should have established procedures for responding to suspicious transactions. Your sales staff should be familiar with these procedures and receive regular training on them.

**Mail Order/Telephone Order Merchants**

For suspicious MO/TO transactions, you should:

- **Ask for a Code 10 Authorization**: A separate phone call to your authorization center asking for a Code 10 authorization lets the center know you have concerns about a transaction. (For more information, see Code 10 Calls on page 33.)

- **Ask the customer for additional information**: For example, ask for day and evening phone numbers, and call the customer back later. Some merchants ask for the bank name on the front of the card.

- **Separately confirm the order with the customer**: Send a note to the customer’s billing address, rather than the shipping address.
When requesting additional information to verify orders, telephone order employees should use a conversational tone so as not to arouse customers’ suspicions. If a customer balks or asks why the information is needed, employees should say they are trying to protect cardholders from the high cost of fraud.

Internet Merchants

For suspicious transactions, Internet merchants should establish effective procedures for cardholder verification calls. Contacting customers directly not only reduces fraud risk, but also builds customer confidence and loyalty. Your verification procedures should address the need both to identify fraud and leave legitimate customers with a positive impression of your company.

- Use directory assistance or Internet search tools—not the telephone number given for a suspect transaction—to find a cardholder’s telephone number.
- Confirm the transaction, resolve any discrepancies, and let the cardholder know that you are performing this confirmation as a protection against fraud.

The Best Advice of All

Trust your instincts! If a sale seems too good to be true, it probably is. We hear all too often that what a merchant thought was a great sale turned out to be fraud. So take the time to check out that huge order that is being shipped somewhere halfway around the world to a customer with whom you’ve never done business. That little bit of extra work may well prevent you from being the victim of a fraud scheme.
Recurring Transactions

A recurring transaction is one in which a cardholder authorizes a merchant to automatically charge his or her account number for the recurring or periodic delivery of goods or services. A typical recurring transaction might be an automatic bill pay for Internet or cable television services, a monthly newspaper subscription, or a health club membership.

Because these transactions are processed automatically, without direct participation of the cardholder, they are particularly liable to potential disputes and copy requests. The following sections provide recommendations for merchant policies and procedures to minimize such problems.

For First Recurring Transactions

An initial, or set-up, recurring transaction should be processed the same as any MO/TO or Internet transaction. If set up by mail or telephone, you should submit AVS and CVV2 queries with the authorization. For online transactions, cardholder identity should be authenticated with Verified by Visa.

The sales receipt for an initial recurring transaction must include the following information:

- The phrase “recurring transaction”
- The frequency of the debits
- The period of time the cardholder has agreed to for the debits

Setting Up Recurring Transactions by E-Mail

Visa allows Internet merchants to accept an electronic record, such as an e-mail message, as cardholder permission to set up a recurring transaction. This record should be kept on file for the duration of the arrangement and provided to the card issuer upon request.
For All Recurring Transactions

To minimize the risk associated with all recurring transactions, merchants should:

- Participate in Visa Account Updater (VAU) to verify that on-file information, including account number and expiration date, is correct. VAU is a Visa service that allows merchants, merchant banks, and issuers to exchange electronic updates of cardholder account information.
- Keep the cardholder’s expiration date on file and include it in all authorization requests.
- Use AVS.
- Ensure that all recurring transactions are clearly identified as such. For example, where a recurring transaction is set up by mail or telephone, it should have a MO/TO E-Commerce Indicator of 2. This identification is usually handled automatically by a merchant’s transaction-processing system; however, you should check with your merchant bank to confirm that your system is properly set up.
- Notify the customer before billing. Cardholders should be routinely notified of regular recurring payments charged to their Visa account at least 10 days in advance. The advance notification should include the amount to be charged to the account and where necessary, alert the cardholder if the transaction amount exceeds a preauthorized range.

How the Visa Account Updater (VAU) Service Works

1. The card issuer sends information to the Visa Account Updater that includes account number, card expiration date changes, and account closures.
2. The merchant bank sends inquiries to Visa Account Updater for cardholder accounts that their enrolled merchants have on file.
3. Visa Account Updater sends a response to the merchant bank for each inquiry, including updated information.
4. The merchant updates the billing information for the customer.
• Put proper controls in place to protect any stored cardholder information related to the transaction.
• Do not store CVV2 data—this is strictly prohibited.
• Request the cardholder’s Visa account number only as payment for goods or services. The merchant must not use the account number for age verification or any purpose other than payment.
• Check customer logs daily for complaints, especially those relating to transaction amounts or failure to notify customers in advance of a recurring transaction that exceeds the pre-authorized amount range. Follow up with the customer.

### Cancelling Recurring Transactions

To cancel a recurring transaction, merchants should:

- Check customer logs daily for cancellation or non-renewal of services paid for with a recurring transaction. Comply with all cancellation and nonrenewal requests in a timely manner, and notify the cardholder that the recurring payment account has been closed.
- Process all credits promptly. If a cancellation request is received too late to prevent the most recent recurring charge from being posted to the cardholder’s account, submit the credit and notify the cardholder.
- Provide the customer with a cancellation number.

For more information on recurring transactions, see Appendix 1: Training Your Troops, pg. 123 to order Merchant Best Practices for Recurring Transactions (VRM 03.03.06).
With recent media reports of hacker incidences, stolen credit card numbers, and identity theft, consumers are increasingly concerned about information security. Today, consumers want absolute assurance from the merchants with whom they do business that their bankcard account number and other personal information are safe.

To address these concerns, Visa has established the Visa USA Cardholder Information Security Program (CISP) in 2001 to define standards for protecting sensitive cardholder information.

*CISP is based upon the Payment Card Industry (PCI) Data Security Standard, with which all members, merchants, and service providers must comply.* In order to ensure compliance, Visa may require all merchants to validate their implementation of the CISP standards. Validation requirements are based on Visa transaction volume and the risk factors associated with a merchant’s business.

More information about CISP, including the detailed PCI Data Security Standard and CISP compliance validation requirements are available at [www.visa.com/cisp](http://www.visa.com/cisp).
CISP Requirements

The PCI Data Security Standard reflects a “walls of security” philosophy in which no single security measure should ever be considered as providing complete protection from trespassers. Rather, risk of intrusion is minimized by erecting multiple layers of security measures that work together.

The PCI Data Security Standard consists of twelve basic requirements supported by more detailed sub-requirements:

| PCI DATA SECURITY STANDARD                  | 1. Install and maintain a firewall configuration to protect data |
| Build and maintain a Secure Network         | 2. Do not use vendor-supplied defaults for system passwords and other security parameters |
| Protect Cardholder Data                     | 3. Protect shared data |
| Maintain a Vulnerability Management Program | 4. Encrypt transmission of cardholder data and sensitive information across public networks |
| Implement Strong Access Control Measures    | 5. Use and regularly update anti-virus software |
| Regularly Monitor and Test Networks         | 6. Develop and maintain secure systems and applications |
| Maintain an Information Security Policy      | 7. Restrict access to data by business need-to-know |
|                                             | 8. Assign a unique ID to each person with computer access |
|                                             | 9. Restrict physical access to cardholder data |
|                                             | 10. Track and monitor all access to network resources and cardholder data |
|                                             | 11. Regularly test security systems and processes |
|                                             | 12. Maintain a policy that addresses information security |
Who Must Comply

CISP applies to any entity—meaning any merchant or service provider—that stores, processes, or transmits Visa cardholder information. All eligible merchants and service providers, regardless of size (or in the case of service providers, whether they support issuing or merchant activity) must comply with the PCI Data Security Standard.

Beyond basic data security, full implementation of the PCI Data Security Standard benefits merchants in several ways.

• **Customer service.** Customers seek out merchants they feel are “safe.” Confident consumers are loyal customers. They come back again and again, and share their experiences with others.

• **Cost containment.** By protecting your customers, you also minimize your own exposure to risk and the direct and operational costs associated with compromised cardholder information.

• **Public image.** Information security is a frequent topic of media attention. An incident of data loss or compromise not only hurts your customers; it can seriously damage your public image.
Steps and Requirements for Compromised Entities

Entities that have experienced a suspected or confirmed security breach must take prompt action to help prevent additional damage and adhere to CISP and PIN security requirements.

1. Immediately contain and limit the exposure. Prevent the further loss of data by conducting a thorough investigation of the suspected or confirmed compromise of information.

   To facilitate the investigation:
   - Do not access or alter compromised systems (i.e., don’t log on at all to the machine and change passwords, do not log in as ROOT).
   - Do not turn the compromised machine off. Instead, isolate compromised systems from the network (i.e., unplug cable).
   - Preserve logs and electronic evidence.
   - Log all actions taken.
   - If using a wireless network, change SSID on the AP and other machines that may be using this connection with the exception of any systems believed to be compromised.
   - Be on HIGH alert and monitor all systems with cardholder data.

2. Alert all necessary parties immediately. Be sure to contact:
   - Your internal information security group and incident response team.
   - Your Visa acquirer.
   - The Visa Investigations and Incident Management Group immediately at (650) 432-2978.
   - Your local office of the Secret Service.

3. Provide all compromised Visa, Interlink and Plus accounts to your Visa acquirer within 10 business days. All potentially compromised accounts must be provided and transmitted as instructed by your Visa acquirer and Visa Investigations and Incident Management Group. Visa will distribute the compromised Visa account numbers to issuers and ensure the confidentiality of entity and non-public information.

4. Within four business days of the reported compromise:
   - Provide an Incident Response Report document to your Visa acquirer.
   - Visa will determine whether or not an independent forensic investigation be initiated on the compromised entity.
In the event of a security breach, Visa or the acquirer will contact the merchant or service provider to discuss the compromise and review the actions required to demonstrate the ability to prevent future loss or theft of transaction information.

Acquirers may be subject to fines of up to $500,000 per incident if a security breach is caused by a merchant or service provider who is not CISP compliant. Acquirers will not be fined if the compromised merchant or service provider is CISP compliant at the time of the security breach.

Merchants should also be aware of any additional requirements which may apply to them under applicable law in the event of a security breach.
Additional Security Requirements

Merchants should also be aware of the following data security requirements and best practices:

• **Magnetic-Stripe Data.** The Visa U.S.A. Inc. Operating Regulations prohibit merchants and/or their agents from storing the full contents of the magnetic stripe after transaction authorization.

• **CVV2 storage.** The Visa U.S.A. Inc. Operating Regulations prohibit merchants and/or their agents from storing the Card Verification Value 2 data (security code printed within or immediately to the right of the signature panel) after transaction authorization.

• **Know your liability.** Many merchant agreements now include provisions that hold businesses liable for losses resulting from compromised card data if a business (or its third-party processor) lacks adequate data security.
When cardholders do not recognize transactions on their Visa statements, they typically ask their card issuer for a copy of the related transaction receipt to determine whether the transaction is theirs. In this kind of situation, the card issuer first tries to answer the cardholder’s questions. If this cannot be done, the card issuer electronically sends a “request for copy” (also known as a “retrieval request”) to the merchant bank associated with the transaction.

If your transaction receipts are stored at your merchant bank, the bank fulfills the copy request. However, if you store your own transaction receipts, the merchant bank forwards the request to you. You must then send a legible copy of the transaction receipt to the merchant bank, which sends it on to the card issuer.
Transaction Receipt Requirements—Card-Present Merchants

The following are Visa requirements for all transaction receipts generated from electronic point-of-sale terminals (including cardholder-activated terminals).

**Electronic Point-of-sale Terminal Receipts**

- **Merchant or member name and location, or the city and state of the Automated Dispensing Machine or Self-Service Terminal**
- **Transaction Date**
- **Merchant Location Code**
- **Transaction Amount**
- **Truncated Account Number** Visa requires that all new and existing electronic POS terminals provide account number truncation on transaction receipts. This means that only the last four digits of an account number should be printed on the customer’s copy of the receipt.
- **Authorization Code, if applicable, except for Express Payment Service Transactions.**
- **Space for Cardholder Signature, except for:**
  - Transactions in which the PIN is an acceptable substitute for Cardholder signature
  - Limited-Amount Terminal Transactions
  - Self-Service Terminal Transactions
  - Express Payment Service Transactions
- **Refund/Return Policy (optional)**

The example receipt is as follows:

**XYZ SHOES**
1040 PARK ST
ANYTOWN, CA 94501
PHONE #: (000) 555-5555
NOV 10, 2007 12:30PM

**MERCH ID:** 08233004

**REF #:** 003
**ACT #:** **********5220
**EXP:** XX/XX
**CARD:** VISA

**$21.69**

**APPROVAL CODE:** 035789
**TRAN ID:** VGT7ET800815

I AGREE TO PAY ABOVE TOTAL AMOUNT ACCORDING TO CARD ISSUER AGREEMENT

X  
**SIGNATURE**

No refunds after 30 days.

THANK YOU

CARDHOLDER COPY
Transaction Receipt Requirements—Card-Not-Present Merchants

The following are Visa requirements for all manually printed transaction receipts.

**Manual Transaction Receipts**

- **Merchant Name and Location**: Bob Books
  - 2346 West Ave.
  - Seattle, WA 98102
  - Order placed: September 29, 2007
  - www.bobbooks.com

- **Transaction Date**: September 29, 2007

- **Description of Goods or Services**: How to Raise a Puppy (Hardcover) by Jane Russo
  - 1 item(s) Gift options: None

<table>
<thead>

Responding to Copy Requests

The illustration on the next page shows the copy request process. When a card issuer sends a copy request to a merchant bank, the bank has 30 days from the date it receives the request to send a copy of the sales receipt back to the card issuer. If the merchant bank sends the request to you, it will tell you the number of days you have to respond. You must follow the merchant bank’s timeframe.

Once you receive a copy request, you should retrieve the appropriate sales receipt, make a legible copy of it, and fax or mail it to your merchant bank within the specified timeframe. Your merchant bank will then forward the copy to the card issuer, which will, in turn, send it to the requesting cardholder. The question or issue the cardholder had with the transaction is usually resolved at this point.

Also, when you send the copy to the merchant bank, you should use a delivery method that provides proof of delivery. If you mail the copy, send it registered or certified. If you send the copy electronically, be sure you have a written record of the transmittal.

If you store your own sales receipts, you should retain your merchant copies—or copies of them, for example, on CD-ROM—for 12 months from the date of the original transactions to ensure your ability to fulfill copy requests.

Copy Requests by Phone

From time to time—to assist their cardholders—card issuers may call you directly to request a copy of a sales receipt. You are not obligated to fulfill a verbal copy request from a card issuer. However, if you do decide to provide a copy of the sales receipt, be sure to keep a copy for your own records. You may find you need it for dispute-related or accounting purposes.

It Pays to Respond to Copy Requests

Responding to copy requests saves you time and money. As a merchant, you should always:

• Fulfill any copy requests you receive
• Fulfill requests in a timely manner
• Ensure that the receipt copy you send is legible

A copy request that is unfulfilled or late can only be charged back if the retrieval request was for Reason Code 33 “Fraud” or the “true dispute reason” must be presented. Avoiding chargebacks can help you improve your customer service and profitability.
The Copy Request Process

1. Cardholder
   • Questions transaction.
   • Contacts card issuer and may request sales receipt copy.

2. Card issuer
   Electronically requests sales receipt copy from merchant bank through Visa.

3. Visa
   Forwards request to merchant bank (electronically).

4. Merchant Bank
   Receives copy request and fulfills, or forwards to merchant for fulfillment.

5. Merchant
   • Receives copy request
   • Sends sales receipt copy to merchant bank.

6. Merchant Bank
   Receives copy or sales receipt and forwards to Visa (electronically).

7. Visa
   Receives copy and forwards to card issuer (electronically).

8. Card issuer
   Receives copy and forwards to cardholder.

9. Cardholder
   Receives sales receipt copy for review.
How to Minimize Copy Requests

Merchants who keep copy requests to a minimum are also more likely to have lower chargeback rates and higher profitability. Best practices for reducing copy requests include:

Make Sure Customers Can Recognize Your Name on Their Bills

Cardholders must be able to look at their bank statements and recognize transactions that occurred at your establishment. Check with your merchant bank to be sure it has correct information on your “Doing Business As” (DBA) name, city, and state. You can check this information yourself by purchasing an item on your Visa card at each of your outlets and looking at the merchant name and location on your monthly Visa statement. Is your name recognizable? Can your customers identify the transactions made at your establishment?

Make Sure Your Business Name Is Legible on Receipts

Make sure your company’s name is accurately and legibly printed on transaction receipts. The location, size, or color of this information should not interfere with transaction detail. Similarly, you should make sure that any company logos or marketing messages on receipts are positioned away from transaction information.

Handle carbonless paper and carbon/silver-backed paper carefully

Keep white copy of sales draft receipt—give customers colored copy

Change point-of-sale printer cartridge routinely

Change point-of-sale printer paper when colored streak first appears
Train Sales Staff

With proper transaction processing, many copy requests can be prevented at the point of sale. Instruct your sales staff to:

- Follow proper point-of-sale card acceptance procedures.
- Review each transaction receipt for accuracy and completeness.
- Ensure the transaction receipt is readable. (See best practices in next section.)
- Give the cardholder the customer copy of the transaction receipt, and keep the original, signed copy.

Sales associates should also understand that merchant liability encompasses the merchandise as well the dollar amount printed on the receipt; that is, in the event of a dispute, the merchant could lose both.

Avoid Illegible Transaction Receipts

Ensuring legibility of transaction receipts is key to minimizing copy requests and chargebacks. When responding to a copy request, you will usually photocopy or scan the transaction receipt before mailing or electronically sending it to your merchant bank. If the receipt is not legible to begin with, the copy that the bank receives and then sends to the card issuer may not be useful in resolving the cardholder’s question. If this occurs, the transaction may be returned to you as a chargeback for an illegible copy. At this point, unless you can improve the readability of the transaction receipt, you may end up taking a loss on the transaction.

The following best practices are recommended to help avoid illegible transaction receipts.

- **Change point-of-sale printer cartridge routinely.**
  
  Faded, barely visible ink on transaction receipts is the top cause of illegible receipt copies. Check readability on all printers daily, and make sure the printing is clear and dark on every sales draft.

- **Change point-of-sale printer paper when the colored streak first appears.**
  
  The colored streak down the center or the edges of printer paper indicates the end of the paper roll. It also diminishes the legibility of transaction information.

- **Keep the white copy of the transaction receipt.**
  
  If your transaction receipts include a white original and a colored copy, always give customers the colored copy of the receipt. Since colored paper does not photocopy as clearly as white paper, it often results in illegible copies.

- **Handle carbon-backed, silver-backed, or carbonless paper carefully.**
  
  Silver-backed paper appears black when copied. Any pressure on carbon-backed or carbonless paper during handling and storage causes black blotches, making copies illegible.
A chargeback is a transaction that a card issuer returns to a merchant bank as a financial liability and which, in turn, a merchant bank may return to a merchant. In essence, it reverses a sales transaction, as follows:

- The card issuer subtracts the transaction dollar amount from the cardholder’s Visa account. The cardholder receives a credit and is no longer financially responsible for the dollar amount of the transaction.
- The card issuer debits the merchant bank for the dollar amount of the transaction.
- The merchant bank will, most often, deduct the transaction dollar amount from the merchant’s account. The merchant loses the dollar amount of the transaction.

For merchants, chargebacks can be costly. You can lose both the dollar amount of the transaction being charged back and the related merchandise. You also incur your own internal costs for processing the chargeback.
Why Chargebacks Occur

The most common reasons for chargebacks include:

- Customer disputes
- Fraud
- Processing errors
- Authorization issues
- Nonfulfillment of copy requests (only if fraud or illegible)

Although you probably cannot avoid chargebacks completely, you can take steps to reduce or prevent them. Many chargebacks result from easily avoidable mistakes, so the more you know about proper transaction-processing procedures, the less likely you will be to inadvertently do, or fail to do, something that might result in a chargeback (see Avoiding Chargebacks on page 76).

Of course, chargebacks are not always the result of something merchants did or did not do. Errors are also made by merchant banks, card issuers, and cardholders.

Your Responsibility

From the administrative point of view, the main interaction in a chargeback is between a card issuer and a merchant bank. The card issuer sends the chargeback to the merchant bank, which may or may not need to involve the merchant who submitted the original transaction. This processing cycle does not relieve merchants from direct responsibility for taking action to remedy and prevent chargebacks. In most cases, the full extent of your financial and administrative liability for chargebacks is spelled out in your merchant agreement.

For more information on the most common types of chargebacks merchant receive, see Section 7, Chargeback Reason Codes.
The Chargeback Life Cycle

The following illustration shows the chargeback life cycle.

1. Cardholder
   - Disputes transaction.
   - Contacts card issuer with disputed information.

9. Cardholder
   Receives information resolving initial dispute and may be re-billed for item or receives credit.

8. Card issuer
   Receives re-presented item and, if appropriate, re-posts to cardholder’s account. If chargeback issue is not appropriately addressed, card issuer may submit dispute to Visa.

7. Visa
   - Electronically screens re-presentation for technical criteria compliance.
   - If appropriate, forwards re-presentation to card issuer (electronically).

6. Merchant Bank
   Forwards re-presented item to Visa.

Arbitration
If the card issuer disputes a re-presentation from the merchant bank, it may file for arbitration with Visa. In arbitration, Visa decides which party is responsible for the disputed transaction. In most cases, Visa’s decision is final, and must be accepted by both the card issuer and the merchant bank. During arbitration, the Visa USA Arbitration Committee reviews all information/documentation submitted by both parties to determine who has final liability for the transaction.

5. Merchant
   - Receives chargeback.
   - If appropriate, and under certain conditions, can re-present chargeback to its merchant bank.
   - If conditions aren’t met, merchant may have to accept chargeback.

4. Merchant Bank
   Receives chargeback and resolves issue, or forwards to merchant.

3. Visa
   - Electronically screens chargeback for technical criteria compliance.
   - If appropriate, forwards chargeback to merchant bank (electronically).

2. Card issuer
   Reviews eligibility of transaction for chargeback. If appropriate, returns transactions (charges it back) to merchant bank through Visa (electronically).

Compliance
Members may submit a compliance case to Visa USA for committee review if members incur a loss and a valid chargeback or representation is unavailable.
Customer Dispute Chargebacks

Customer disputes are one of the most common reasons for chargebacks. A customer may dispute a transaction because:

- A credit has not been processed when the customer expected it would be.
- Merchandise ordered was never received.
- A service was not performed as expected.
- The customer did not make the purchase; it was fraudulent.

Because these chargebacks may indicate customer dissatisfaction—and the potential for lost sales in the future—addressing their underlying causes should be an integral part of your customer service policies.
Invalid Chargebacks

If a cardholder with a valid dispute contacts you directly, act promptly to resolve the situation. Issue a credit, as appropriate, and send a note or e-mail message to let the cardholder know he or she will be receiving a credit.

Responding to the needs of card issuers, merchant banks, and merchants, Visa has implemented sophisticated systems that significantly reduce chargebacks and vastly improve the chargeback process. When Visa systems detect an invalid chargeback, it is automatically returned to the card issuer that originated it, and the merchant and merchant bank never see it. Many merchant banks also have systems that routinely review exception items, allowing them to resolve issues before a chargeback is necessary. Together, these systems ensure that any chargebacks you receive are usually those that only you can respond to or that cannot be remedied in any other way.
Chargeback Remedies

Even when you do receive a chargeback, you may be able to resolve it without losing the sale. Simply provide your merchant bank with additional information about the transaction or the actions you have taken related to it. For example, you might receive a chargeback because the cardholder is claiming that credit has not been given for returned merchandise. You may be able to resolve the issue by providing proof that you submitted the credit on a specific date. Send this information to your merchant bank in a timely manner.

The key in this and similar situations is always to send your merchant bank as much information as possible to help it remedy the chargeback. With appropriate information, your merchant bank may be able to resubmit, or “re-present,” the item to the card issuer for payment.

Timeliness is also essential when attempting to remedy a chargeback. Each step in the chargeback cycle has a defined time limit during which action can be taken. If you or your merchant bank does not respond during the time specified on the request—which may vary depending on your merchant bank—you will not be able to remedy the chargeback.

Although many chargebacks are resolved without the merchant losing the sale, some cannot be remedied. In such cases, accepting the chargeback may save you the time and expense of needlessly contesting it.

Represent-ment Rights for Card-Not-Present Merchants

Card-not-present merchants should be familiar with the chargeback representation rights associated with the use of Address Verification Service (AVS), Card Verification Value 2 (CVV2), and the option to provide compelling information. Specifically, your merchant bank can represent a charged-back transaction if:

- You received an AVS positive match in the authorization message and if the billing and shipping addresses are the same. You will need to submit proof of the shipping address and signed proof of delivery.
- You submitted an AVS query during authorization and received a “U” response from a U.S. card issuer. This response means the card issuer is unavailable or does not support AVS.
- You submitted a CVV2 verification request during authorization and received a “U” response from a U.S. card issuer. This response means the card issuer does not support CVV2.
• You can provide documentation that you:
  - spoke to the cardholder and he or she now acknowledges the validity of the transaction, OR
  - received a letter or e-mail from the cardholder that he or she now acknowledges the validity of the transaction.

If you believe you have AVS, CVV2, or compelling information representment rights on a charged-back transaction, work with your merchant bank to ensure that all supporting evidence for the representment is submitted.
Avoiding Chargebacks

Most chargebacks can be attributed to improper transaction-processing procedures and can be prevented with appropriate training and attention to detail. The following best practices will help you minimize chargebacks.

**Point of Sale**

- **Declined Authorization.** Do not complete a transaction if the authorization request was declined. Do not repeat the authorization request after receiving a decline, ask for another form of payment.

- **Transaction Amount.** Do not estimate transaction amounts. For example, restaurant merchants should authorize transactions only for the known amount on the check; they should not add on a tip.

- **Referrals.** If you receive a “Call” message in response to an authorization request, do not accept the transaction until you have called your authorization center. In such instances, be prepared to answer questions. The operator may ask to speak with the cardholder. If the transaction is approved, write the authorization code on the sales receipt. If declined, ask the cardholder for another Visa card.

- **Expired Card.** Do not accept a card after its “Good Thru” or “Valid Thru” date.

- **Card Imprint for Key-Entered Card-Present Transactions.** If, for any reason, you must key-enter a transaction to complete a card-present sale, make an imprint of the front of the card on the sales receipt, using a manual imprinter. Avoid capturing an impression of the card using a pencil, crayon, or other writing instrument. This process does not constitute a valid imprint. Even if the transaction is authorized and the cardholder signs the receipt, the transaction may be charged back to you if the receipt does not have an imprint of the embossed account number and expiration date.

- **Cardholder Signature.** The cardholder’s signature is required for all card-present transactions. Failure to obtain the cardholder’s signature could result in a chargeback if the cardholder later denies authorizing or participating in the transaction. When checking the signature, always compare the first letter and spelling of the surname on the sales receipt with the signature on the card. If they are not the same, ask for additional identification or make a Code 10 call.

- **Digitized Cardholder Signature.** Some Visa cards have a digitized cardholder signature on the front of the card, in addition to the hand-written signature on the signature panel on the back. However, checking the digitized signature is not sufficient for completing a transaction. Sales staff must always compare the customer’s signature on the sales receipt with the hand-written signature in the signature panel.
• **Fraudulent Card-Present Transaction.** If the cardholder is present and has the account number but not the card, do not accept the transaction. Even with an authorization approval, the transaction can be charged back to you if it turns out to be fraudulent.

• **Legibility.** Ensure that the transaction information on the sales receipt is complete, accurate, and legible before completing the sale. An illegible receipt, or a receipt which produces an illegible copy, may be returned because it cannot be processed properly. The growing use of electronic scanning devices for the electronic transmission of copies of sales receipts makes it imperative that the item being scanned be very legible.

---

**“No Chargeback” Sales Receipts**

Independent entrepreneurs have been selling sales-receipt stock bearing a statement near the signature area that the cardholder waives the right to charge the transaction back to the merchant. These receipts are being marketed to merchants with the claim that they can protect businesses against chargebacks; in fact, they do not. “No chargeback” sales receipts undermine the integrity of the Visa payment system and are prohibited.

---

**Sales-Receipt Processing**

• **One Entry for Each Transaction.** Ensure that transactions are entered into point-of-sale terminals only once and are deposited only once. You may get a chargeback for duplicate transactions if you:

  - Enter the same transaction into a terminal more than once
  - Deposit both the merchant copy and bank copy of a sales receipt with your merchant bank
  - Deposit the same transaction with more than one merchant bank

• **Voiding Incorrect or Duplicate Sales Receipts.** Ensure that incorrect or duplicate sales receipts are voided and that transactions are processed only once.

• **Depositing Sales Receipts.** Deposit sales receipts with your merchant bank as quickly as possible, preferably within one to five days of the transaction date; do not hold on to them.

• **Timely Deposit of Credit Transactions.** Deposit credit receipts with your merchant bank as quickly as possible, preferably the same day the credit transaction is generated.

• **Ship Merchandise Before Depositing Transaction.** For card-not-present transactions, do not deposit sales receipts with your merchant bank until you have shipped the related merchandise. If customers see a transaction on their monthly Visa statement before they receive the merchandise, they may contact their card issuer to dispute the billing. Similarly, if delivery is delayed on a card-present transaction, do not deposit the sales receipt until the merchandise has been shipped.
• **Requests for Cancellation of Recurring Transactions.** If a customer requests cancellation of a transaction that is billed periodically (monthly, quarterly, or annually), cancel the transaction immediately or as specified by the customer. As a customer service, advise the customer in writing that the service, subscription, or membership has been cancelled and state the effective date of the cancellation.

Customer Service

• **Delayed Delivery.** If the merchandise or service to be provided to the cardholder will be delayed, advise the cardholder in writing of the delay and the new expected delivery or service date.

• **Item Out of Stock.** If the cardholder has ordered merchandise that is out of stock or no longer available, advise the cardholder in writing. If the merchandise is out of stock, let the cardholder know when it will be delivered. If the item is no longer available, offer the option of either purchasing a similar item or cancelling the transaction. Do not substitute another item unless the customer agrees to accept it.

• **Disclosing Refund, Return, or Service Cancellation Policies.** If your business has policies regarding merchandise returns, refunds, or service cancellation, these policies must be disclosed to the cardholder at the time of the transaction. Your policies should be pre-printed on your sales receipts; if not, write or stamp your refund or return policy information on the sales receipt near the customer signature line before the customer signs (be sure the information is clearly legible on all copies of the sales receipt). Failure to disclose your refund and return policies at the time of a transaction could result in a dispute should the customer return the merchandise.

• **Return, refund, and cancellation policy for Internet merchants.** This policy must be clearly posted to inform cardholders of their rights and responsibilities (e.g., if the merchant has a limited or no refund policy, this must be clearly disclosed to cardholder on your web site before the purchase decision is made to prevent misunderstandings and disputes). The limited or no refund policy must be displayed on a screen that requires the cardholder to “click and accept” the terms of your policy. This policy page cannot be bypassed.
Chargeback Monitoring

As with copy requests, monitoring chargeback rates can help merchants to pinpoint problem areas in their businesses and improve prevention efforts. However, while copy request volume is often a good indicator of potential chargebacks, actual chargeback rates and monitoring strategies vary by merchant type. Card-not-present merchants may experience higher chargebacks than retail merchants as the card is not swiped, which increases liability for chargebacks.

General recommendations for chargeback monitoring include:

- **Track chargebacks and representations by reason code.** Each reason code is associated with unique risk issues and requires specific remedy and reduction strategies.

- **Include initial chargeback amounts and net chargebacks after representment.**

- **Track card-present and card-not-present chargebacks separately.** If your business combines traditional retail with card-not-present transactions (MO/TO or Internet), track the card-present and card-not-present chargebacks separately. Similarly, if your business combines MO/TO and Internet sales, these chargebacks should also be monitored separately.

Visa monitors all merchant chargeback activity on a monthly basis and alerts merchant banks when any one of their merchants has excessive chargebacks.

Once notified of a merchant with excessive chargebacks, merchant banks are expected to take appropriate steps to reduce the merchant’s chargeback rate. Remedial action will depend on merchant type, sales volume, geographic location, and other risk factors. In some cases, you may need to provide sales staff with additional training or review sessions on card acceptance procedures. In others, you should work with your merchant bank to develop a detailed chargeback-reduction plan.
Visa USA has three chargeback monitoring programs:

1. Merchant Chargeback Monitoring Program (MCMP)
   The Merchant Chargeback Monitoring Program (MCMP) monitors chargeback rates for all merchant banks and merchants on a monthly basis. If a merchant meets or exceeds specified chargeback thresholds, its merchant bank is notified in writing.
   First notification of excessive chargebacks for a specific merchant is considered a warning. If actions are not taken within an appropriate period of time to return chargeback rates to acceptable levels, Visa may impose financial penalties on merchant banks that fail to reduce excessive merchant-chargeback rates.

2. High-Risk Chargeback Monitoring Program (HRCMP)
   The High Risk Chargeback Monitoring Program (HRCMP) is specifically targeted at reducing excessive chargebacks by high-risk merchants. As defined by Visa, high-risk merchants include direct marketers, travel services, outbound telemarketers, inbound teleservices, and betting establishments.
   HRCMP applies to all high-risk merchants that meet or exceed specified chargeback thresholds. Under HRCMP, there is no warning period and fees may be assessed to the merchant bank immediately if a merchant has an excessive chargeback rate.

3. Global Merchant Chargeback Monitoring Program (GMCMP)
   The Global Chargeback Monitoring Program (GMCMP) is operated by Visa International and administered by each region. The program augments the U.S. Merchant Chargeback Monitoring Program (MCMP) in effect today and is intended to encourage merchants to reduce their incidence of chargebacks by using sound best practices.
   The GMCMP applies when a merchant meets or exceeds specified International chargeback thresholds. Under GMCMP, there is no warning period and fees may be assessed to the merchant bank immediately if a merchant has an excessive chargeback rate.
When Chargeback Rights Do Not Apply

Sometimes, a problem between members is not covered under Visa’s chargeback rights. To help resolve these kinds of rule violations, Visa USA has established the compliance process, which basically offers members another dispute resolution option. The Visa compliance process can be used when all of the following conditions are met:

- A violation of the Visa U.S.A. Inc. Operating Regulations occurred.
- The violation is not covered by a specific chargeback right.
- The member incurred a financial loss as a direct result of the violation.
- The member would not have incurred the financial loss if the regulation had been followed.
There are many different violations that can be classified as a compliance issue. The list below offers a quick peek at some of the compliance violations most commonly cited.

- The cardholder stays at a lodging merchant and is also billed a no-show from the same location, for the same date.
- The merchant adds a surcharge for using a credit card as a means of payment.
- The merchant bills the cardholder for a delinquent account, or for the collection of a dishonored check.
- The merchant re-posts a charge after the issuer initiated a chargeback.
- The merchant insists that the cardholder sign a blank sales draft before the final dollar amount is known.
- The cardholder is billed for an advance deposit and the deposit amount is **not** applied toward the balance of the stay.
- A merchant, which does not hold a Visa account through a merchant bank, processes a transaction through another Visa merchant.
- The cardholder cancels the airline transaction and the merchant fails to issue credit or prove that proper disclosure was given to the cardholder at the time of the transaction.
- The cardholder arrives at a lodging merchant, but leaves within a reasonable time period due to the poor quality of the accommodation.
- The merchant has failed to properly disclose their return policy to the cardholder at the time of the transaction.
- The merchant failed to compare the signature on the card to the signature on the transaction receipt.
- Cardholder was credited more than once for the same transaction.

During compliance, the filing member must give the violating member an opportunity to resolve the issue. This is referred to as pre-compliance. If the dispute remains unresolved, Visa’s Compliance Committee will review the information presented and determine which member has final responsibility for the transaction.
SECTION 7  Chargeback Reason Codes

The chargebacks discussed in this section are grouped into six classifications:

- Non-Receipt of Information
- Fraud Codes
- Authorization Errors
- Processing Errors
- Cancelled or Returned
- Non-Receipt of Goods or Services
These classifications are designed to help you understand the underlying business reason for the chargeback. In addition, the following information is included for each type of chargeback.

- **Definition.** Each chargeback is defined. The definition will help you understand what happened from the card issuer’s perspective; that is, what conditions or circumstances existed that caused the card issuer to issue a chargeback on the item.

- **Most Common Causes.** This section looks at the chargeback from the merchant’s perspective; that is, what may have been done or not done that ultimately resulted in the item being charged back. As the “Causes” sections are short, they may be helpful to you as quick references and for training purposes.

- **Merchant Actions.** This section outlines specific steps that merchants can take to help their merchant banks remedy the chargeback, prevent future recurrence, and address customer service issues. You will also be advised under what circumstances—that is, where no remedy is available—you should accept financial liability for the charged back item. Merchant actions are further classified by the staff functions within your establishment most likely to be responsible for taking the actions.
  - **Back-office Staff.** The persons responsible for your general operations, administration, and processing of chargebacks and copy requests.
  - **Point-of-Sale Staff.** The persons responsible for accepting payment from customers for goods and services at the point of sale. For card-not-present environments, point-of-sale staff refers to order desk staff who receive and process orders.
  - **Owner/Manager.** The persons responsible for the policies, procedures, and general management of your establishment. Owners and managers may also be responsible for training.
Within each of these categories, the suggestions and recommendations for merchant action are further classified by action type.

- **(PR) Possible Remedy.** Steps you could take to help your merchant bank re-present (resubmit) a chargeback item.
- **(NR) No Remedy.** You must accept the chargeback.
- **(PM) Preventive Measures.** Possible steps you could take to minimize future recurrence of the particular type of chargeback being discussed.
- **(CS) Customer Service.** Suggestions that may help you provide enhanced service to your customers.

**Disclaimer**

The chargeback information in this appendix is current as of the date of printing. However, chargeback procedures are frequently updated and changed. Your merchant agreement and Visa U.S.A. Inc. Operating Regulations take precedence over this guide or any updates to its information.

An overview of the chargeback life cycle and merchant responsibilities for representment and prevention can be found in Section 6: Chargebacks.
Non-Receipt of Information

Reason Code 60: Request Copy Illegible or Invalid

| Definition | The card issuer requested a copy of the sales receipt and received an illegible copy, or an incomplete substitute receipt, or something other than the requested item. |
| Most Common Causes | The merchant submitted a substitute sales receipt that did not contain all of the required information or the transaction receipt was not legible, or was other than the requested item because: |
| | • The point-of-sale printer ribbon was worn and the ink was too light. |
| | • The point-of-sale paper roll was nearing the end, and the colored streak indicating this obscured transaction information. |
| | • The copy was on colored paper. |
| | • The carbonless paper of the original sales receipt was mishandled, causing black blotches and making copies illegible. |
| | • The original sales receipt was microfilmed at a reduced size, resulting in blurred and illegible copies. |
| | • The document submitted was not the requested copy of the sales receipt. |

| Merchant Actions | Back-Office Staff |
| | **Legible or Complete Copy** |
| | (PR) If possible, resubmit a legible or complete copy of the sales receipt to your merchant bank. |
| | **Incomplete Sales Receipt** |
| | (NR) If missing information or a legible copy of the sales receipt cannot be provided, accept the chargeback. (See page 66 of this guide for further details regarding legible receipts.) |
| | **Incomplete Sales Receipt—Fraud** |
| | If a retrieval request is fraud-related and the merchant provides an incomplete or invalid substitute sales receipt, accept the chargeback. The merchant has no representment rights unless the card issuer’s chargeback is for “illegible item received.” |
Reason Code 60: Request Copy Illegible or Invalid (continued)

Microfilming Sales Receipts
(PR) If your establishment microfilms sales receipts, make copies from the microfilm at the same size as the original receipt—reduced images result in blurred and illegible copies.

Point-of-Sale Staff
Change Point-of-Sale Printer Ribbon
(PR) Change point-of-sale printer ribbon routinely. Faded, barely visible ink on sales receipts is the top cause of illegible receipt copies.

Change Point-of-Sale Printer Paper
(PR) Change point-of-sale printer paper when colored streak first appears. The colored streak down the center or the edges of printer paper indicates the end of the paper roll. It also diminishes the legibility of transaction information.

Keep White Copy of Sales Receipt
(PR) Keep the white copy of the sales receipt and give customers the colored copy. Colored paper does not copy as clearly as white paper and often results in illegible copies.

Carbonless Paper Used for Sales Receipts
(PR) Handle carbonless paper and carbon- or silver-back paper carefully. Silver-back paper appears black when copied. Any pressure on carbonless and carbon-back paper during handling and storage causes black blotches, making copies illegible. Always keep the top copy.

Owner/Manager
Company Logo Position on Sales Receipts
(PR) Position your company logo or marketing messages on sales receipts away from transaction information. If your company name, logo, or marketing message is printed across the face of sales receipts, the transaction information on a copy may be illegible.

(PR) For fraud-related retrieval requests, provide a copy of the signed sales receipt.
## Reason Code 75: Cardholder Does Not Recognize Transaction

<table>
<thead>
<tr>
<th>Definition</th>
<th>The card issuer received a complaint from a cardholder stating that the transaction appearing on the billing statement is not recognized. This code applies to both card-present and card-not-present transactions.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Most Common Causes</td>
<td>The merchant store name or location reflected on the cardholder’s billing statement was not correct or recognizable to the cardholder.</td>
</tr>
</tbody>
</table>
| Merchant Actions | **Back-Office Staff**

**Cardholder Participated in Transaction**

(PR) Provide any documentation or information that would assist the cardholder in recognizing the transaction. For example:

- Sales receipt
- Shipping invoice or delivery receipts
- Description of merchandise or service purchased

**Owner/Manager**

**Merchant Name**

(PM) The merchant name is the single most important factor in cardholder recognition of transactions. Therefore, it is critical that the merchant name, while reflecting the merchant’s “Doing Business As” (DBA) name, also be clearly recognizable to the cardholder. Work with your merchant bank to ensure your merchant name, city, and state are properly identified in the clearing record.
Fraud Codes

Reason Code 57: Fraudulent Multiple Transactions

Definition: The card issuer received a written claim from the cardholder, acknowledging participation in at least one transaction at the merchant outlet but disputing participation in the remaining transaction. The cardholder also states the card was in his or her possession at the time of the disputed transactions.

Most Common Causes:
The merchant:
- Failed to void multiple transactions
- Attempted to process transactions fraudulently

Card-Not-Present Transactions
This chargeback does not apply to recurring payments or to mail order, telephone order, or Internet transactions.

Merchant Actions

Back-Office Staff

Credit Processed on Disputed Transactions
(PR) If the appropriate credit has been processed to the cardholder’s account on one or all of the disputed transactions, send your merchant bank evidence of the credits.

Cardholder Participated in Multiple Transactions
(PR) If the cardholder did participate in more than one valid transaction, provide your merchant bank with appropriate documentation, such as sales receipts, invoices, etc.

Credit Not Processed on Disputed Transactions
(NR) If appropriate credit has not yet been processed on the disputed transaction, accept the chargeback. Do not process a credit since the chargeback has already performed this function.

Owner/Manager

Investigate All Potentially Fraudulent Transactions
(PR) This type of chargeback could have serious implications for your establishment as it may indicate potential fraud occurring at the point of sale. It also may simply be the result of a mistake by point-of-sale staff. In either case, chargebacks of this nature require immediate investigation.
Reason Code 62: Counterfeit Transaction

**Definition**
The card issuer received a written complaint from the cardholder claiming:
- He or she was in possession of the valid card on the date of transaction.
- He or she did not authorize or participate in the transaction.

**Most Common Causes**
The merchant:
- Failed to compare the first four-digits of the embossed account number on the card with the preprinted digits below the embossed number for a card-present transaction.
- Received authorization without transmission of the entire magnetic stripe.

**Merchant Actions**

**Back-Office Staff**
**Card and Transaction Were Valid**
(PR) If the card was swiped and transaction authorized at the point of sale, provide your merchant bank with a copy of the printed sales receipt.

**Transaction Was Counterfeit**
(NR) If the transaction was counterfeit, accept the chargeback.

**Point-of-Sale Staff**
**Check Card Security Features**
(PM) Check all card security features before completing the transaction. In particular, the first four digits of the embossed account number on the card should match the printed four-digit number below the embossed number. If the numbers do not match, make a Code 10 call. You should also look for other signs of counterfeit, such as embossed numbers that are blurry or uneven, or ghost images beneath the embossed numbers, indicating they have been changed.

**Key-Entered Transaction**
(PM) If you key-enter a transaction because the magnetic stripe cannot be read, be sure to get an imprint of the front of card either on the printed sales receipt or a manual sales receipt form, which should be signed by the customer.

**Code 10 Calls**
(PM) If you are suspicious of a card or cardholder for any reason, make a Code 10 call.
## Reason Code 81: Fraudulent Transaction—Card-Present Environment

### Definition

The card issuer received a sales receipt that is missing required information, indicating a potentially fraudulent transaction. Specific situations where this chargeback code may be used include the following:

- The card issuer received a sales receipt that has no imprint of the card's embossed or magnetic-stripe information or the cardholder's signature, and either: the cardholder certifies that he or she neither authorized nor participated in the transaction OR the card issuer certifies that no valid card with that account number existed on the transaction date.

This chargeback is not valid for recurring payments and card-not-present transactions. It is valid for card-present sales on self-serve POS terminals, such as cardholder-activated gas pumps.

### Most Common Causes

The merchant or service establishment:

- Did not swipe the card through a magnetic-stripe reader
- Did not make a manual imprint of the card account information on the sales receipt for a key-entered transaction
- Completed a card-present transaction without obtaining the cardholder’s signature on the sales receipt
- Completed a card-not-present transaction but did not identify the transaction as a MO/TO or Internet purchase.

### Merchant Actions

#### Back-Office Staff

**Card Imprint from Magnetic Stripe Was Obtained**

(PR) If account information was captured from the card’s magnetic stripe, request that your merchant bank send a copy of the authorization record to the card issuer as proof that the card’s magnetic stripe was read. You should also provide a copy of the sales receipt proving the cardholder’s signature was obtained.

**Card Imprint Was Manually Obtained**

(PR) If the account number was manually imprinted on the sales receipt, send a copy of the sales receipt to your merchant bank as documentation. The copy of the sales receipt must also contain the cardholder’s signature in order to remedy the chargeback.

**Card Imprint Was Not Obtained**

(PR) If the account number was not obtained from either the magnetic stripe or manually, accept the chargeback.

**Merchant Actions Legend:**

(PR) Possible Remedy  (PM) Preventive Measure  (NR) No Remedy  (CS) Customer Service Suggestion
Reason Code 81: Fraudulent Transaction—Card-Present Environment (continued)

Signature Was Obtained
(PR) If the cardholder’s signature was obtained on the sales receipt or a related document (for example, an invoice with cardholder’s name, address, and the date of the transaction) send a copy of the document to your merchant bank. You should also send evidence that the cardholder’s card was present, specifically either a manually imprinted sales receipt or authorization record proving the magnetic stripe was read. You must be able to prove the sales receipt and other documentation are from the same transaction. For example, if the imprint is on a separate receipt, the date, amount and authorization code for the transaction should also be written on this document at the point of sale.

Signature Was Not Obtained
(NR) If the cardholder’s signature was not obtained for a card-present transaction, accept the chargeback.

Point-of-Sale Staff

Swipe Cards or Use a Manual Imprinter
(PM) Obtain a record of the card’s account and expiration date information on the sales receipt by (1) swiping the card through a terminal to capture the account information from the card’s magnetic stripe, or (2) using a manual imprinter to obtain the card’s embossed information. If you use a manual imprinter, make sure the imprint can be positively matched with other transaction information to prove the card was present. For example, if you take an imprint on a separate receipt for a key-entered transaction, you should write the transaction date, amount, and authorization code on this document before completing the sale.

Obtain Cardholder Signature
(PM) Obtain the cardholder’s signature on the sales receipt for all card-present transactions. Always compare the customer’s signature on the sales receipt to the signature on the back of the card. If the names are not spelled the same or the signatures look different, call your voice authorization center and ask for a “Code 10” authorization.

Owner/Manager

Remind Staff to Obtain an Electronic or Manual Imprint
(PM) Train sales staff to swipe the card through a magnetic-stripe terminal or to use a manual imprinter to imprint the embossed information from the front of the card onto a sales receipt that will be signed by the customer.

Manual Imprinter or Portable Electronic Terminal
(PM) If your business delivers merchandise or performs services at customers’ homes, equip your field employees with manual imprinters or portable electronic terminals that can read the card’s magnetic stripe.
Reason Code 81: Fraudulent Transaction—Card-Present Environment (continued)

Cardholder Signature
(PR) Train sales staff to (1) obtain the cardholder’s signature on the sales receipt for all card-present transactions; (2) compare the signature on the receipt to the signature on the back of the card (the names must be spelled the same); and (3) accept only signed cards.

Investigate High Volume of Chargebacks
(PR) If you are receiving a high volume of Code 81 chargebacks, investigate. It could be a sign of internal fraud. You may need to examine sales receipts related to the chargebacks to check which POS terminals and sales staff were involved in these transactions.

Train Staff, Clean Magnetic-Stripe Readers
(PR) A high volume of Code 81 chargebacks may also indicate a need for additional staff training in proper card acceptance procedures or better maintenance and cleaning of the magnetic-stripe readers in your terminals. Ask your merchant bank about point-of-sale training and educational materials and ReaderCleaner™ cards for cleaning magnetic-stripe readers; all are available from Visa.
Reason Code 83: Fraudulent Transaction—Card Absent Environment

**Definition**

The card issuer received:

- A written complaint from a cardholder in regard to a card-not-present transaction, claiming that he or she did not authorize or participate in the transaction.
- A card-not-present transaction charged to a fictitious account number for which authorization approval was not obtained.

Card-not-present transactions include mail order, telephone order, Internet, pre-authorized health care transactions, recurring and advance payment transactions, and no-show fees.

**Most Common Causes**

**The merchant:**

- Processed a card-not-present transaction from a person who was fraudulently using an account number.
- Processed a card-not-present transaction without submitting an authorization request.

**The cardholder:**

- Did not recognize a card-not-present transaction on his or her statement due to an unclear or confusing merchant name.
- Had his or her account number taken by fraudulent means.

**Merchant Actions**

**Authorization Was Obtained and AVS or CVV2 Used**

(PR) If the transaction was a MO/TO or Internet transaction and you:

- received an authorization approval and an exact match to the AVS query (that is, a match on the cardholder’s street number and ZIP code), and have proof that the merchandise was delivered to the AVS address, send a copy of the transaction invoice, proof of delivery and any other information pertaining to the transaction to your merchant bank so it may attempt a representment.
- verified AVS or CVV2 and the card issuer gave a "U" response, you have a representment right. Inform your merchant bank.

**AVS and CVV2**

are primarily fraud-prevention tools; in some instances they provide merchants with a representment right but do not directly prevent chargebacks. When used correctly, Verified by Visa prevents issuing banks from charging back fraudulent transactions.

**Merchant Actions Legend:**

(PR) Possible Remedy (PM) Preventive Measure (NR) No Remedy (CS) Customer Service Suggestion
Reason Code 83: Fraudulent Transaction—Card Absent Environment (continued)

Authorization Obtained, AVS or CVV2 Not Used
(PR) If you did not use AVS and the item has been charged back to you, send a copy of the transaction invoice, signed proof of delivery and any other information you may have pertaining to it to your merchant bank so it may attempt a representment.

Was a Card-Present Transaction
(PR) If the transaction was face-to-face and the card was present, the chargeback is invalid. To prove the cardholder participated in the transaction, provide your merchant bank either with a copy of the sales receipt bearing the card imprint and signature of the customer or with an authorization record proving the magnetic stripe was read.

Recurring Payment
(PR) Because recurring payment transactions occur on a regular basis over time, it is possible that a cardholder’s account could be closed or the account number changed (for example, if a new card is issued due to a bank merger or account upgrade). If authorization is declined on a subsequent recurring payment transaction, contact the customer to obtain updated payment information.

Point-of-Sale Staff

Obtain Authorization for All Card-Not Present Transactions
(PM) Always request authorization for mail order, telephone order, Internet, and recurring transactions, regardless of the dollar amount.

Verify Account Number with Customer
(PM) For telephone transactions, always verify (read back) the account number with the customer to avoid errors.

Identify Transaction as Card-Not-Present
All card-not-present transactions should be identified by the appropriate code for mail order, telephone order, or Internet during both the authorization and settlement process. In most cases, this will be automatically done by your transaction-processing terminal or system, or by pressing a MO/TO indicator button. If not, be sure to write the appropriate code on the transaction receipt: “MO” for mail order; “TO” for telephone order; and “ECI” for Internet.
Reason Code 83: Fraudulent Transaction—Card Absent Environment (continued)

Owner/Manager

Risk-Management Tools
(PR) Possible Remedy  (PM) Preventive Measure  (NR) No Remedy  (CS) Customer Service Suggestion

(PM) For card-not-present transactions, consider using AVS, CVV2, and Verified by Visa to help reduce fraud. Contact your merchant bank for more information on these important risk-management tools.

Identifying Card-Not-Present Transactions
(PM) Instruct sales staff to ensure card-not-present transaction receipts contain an appropriate code identifying them as either MO/TO or Internet purchases. If the appropriate code is not printed on the receipt by your transaction-processing system, sales staff should be instructed to write it: “MO” for mail order, “TO” for telephone order, and “ECI” for Internet. In addition, if your business is processing both card-present and card-not-present transactions, ensure that your staff processes the transactions appropriately. Mislabeling a card-present transaction could unnecessarily result in increased chargebacks.

Merchant Name
(PM) The merchant name is the single most important factor in cardholder recognition of transactions. Therefore, it is critical that the merchant name, while reflecting the merchant’s DBA name, also be clearly recognizable to the cardholder. You can reduce copy requests and chargebacks by working with your merchant bank to ensure your merchant name, city, and state, or phone number or Internet address are properly identified in the clearing record.
Authorization Errors

Reason Code 71: Declined Authorization

<table>
<thead>
<tr>
<th>Definition</th>
<th>The card issuer received a transaction for which authorization had been declined.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Most Common Causes</td>
<td>The merchant or service establishment attempted to circumvent or override a declined authorization by one of the following methods:</td>
</tr>
<tr>
<td></td>
<td>• <strong>Forced posting.</strong> After a decline response, the merchant forced the transaction through without attempting another authorization request.</td>
</tr>
<tr>
<td></td>
<td>• <strong>Multiple authorization attempts.</strong> After an initial authorization decline, the merchant re-swiped the card one or more times until the transaction was authorized. In this situation, authorization might occur if the card issuer’s authorization system times out or becomes unavailable, and the transaction is forwarded to Visa.</td>
</tr>
<tr>
<td></td>
<td>• <strong>Alternative authorization method.</strong> The merchant swiped the card at a POS terminal, and the authorization was declined. The merchant then resubmitted the transaction by key entry or called in a voice authorization, and received an approval.</td>
</tr>
</tbody>
</table>

**Merchant Actions**

**Back-Office Staff**

**Transaction Was Authorized**

(PR) If you obtained an authorization approval code, inform your merchant bank of the transaction date and amount.

**First Authorization Attempt Declined**

(NR) Accept the chargeback if your first authorization attempt was declined. Multiple authorization attempts may not be accepted as valid evidence to show that an approval was obtained.

**Point-of-Sale Staff**

**Obtain Authorization**

(PM) Obtain an authorization before completing transactions. With most POS terminals, an authorization request is sent automatically when the card is swiped and the dollar amount entered. If your terminal also has a printer, a receipt is printed if the transaction is approved and not printed if the transaction is declined.
Reason Code 71: Declined Authorization (continued)

**Magnetic-Stripe Reader Down or Card’s Magnetic Stripe Damaged**

(PM) If you are unable to get an electronic authorization because your terminal isn’t working or because the card’s magnetic stripe cannot be read, call your voice authorization center. If the transaction is approved, write the approval code on the sales receipt in the appropriate space, and imprint the card’s embossed information onto the receipt, using a manual imprinter.

**Never Accept a Declined Transaction.**

(PM) If a transaction is declined, do not accept it. Immediately stop the transaction, and ask the customer for another Visa card or other form of payment.

**Owner/Manager**

**Staff Awareness of Authorization Policy**

(PM) Ensure that all sales staff knows your establishment’s authorization policy. Inform staff that in the event of a declined transaction, they should immediately stop the transaction and ask the customer for another Visa card or other form of payment.
Reason Code 72: No Authorization

Definition

The card issuer received a transaction for which authorization was not obtained. For Automated Fuel Dispenser (AFD) transactions, the card issuer may only chargeback the amount exceeding any of the following:

- Visa Corporate and Purchasing Cards $75
- Visa Fleet Card $150
- All other cards $50

Most Common Causes

Most merchant banks will verify that a transaction was authorized and approved. If the transaction was authorized, Visa systems may reject the chargeback as invalid, and you will never see it.

The merchant did not obtain an authorization for a transaction or, for card-present transactions, obtained it after the transaction date.

Merchant Actions

**Back-Office Staff**

**Transaction Was Authorized**

(PR) If you obtained an authorization approval, inform your merchant bank of the transaction date and amount.

**Transaction Was Not Authorized**

(NR) Accept the chargeback.

**Point-of-Sales Staff**

**Obtain an Authorization**

(PM) Obtain an authorization before completing transactions. The authorization request is sent automatically when you swipe the card and enter the dollar amount. A receipt is printed if the transaction is approved; if it is not approved, you will receive a Decline (or Call Center or Pick Up) message on your POS terminal.

**Magnetic-Stripe Reader Down or Card’s Magnetic Stripe Damaged**

(PM) If you are unable to get an electronic authorization because your terminal isn’t working or because the card’s magnetic stripe cannot be read, you can request an authorization either by key-entering the transaction or calling your voice authorization center. If the transaction is approved, be sure the approval code is on the sales receipt in the appropriate space; in the case of a voice authorization, you will need to write it on the receipt. You should also imprint the embossed account information from the front of the card on a sales receipt or manual sales receipt form, which the customer should sign.
Reason Code 72: No Authorization (continued)

Card-Not-Present Transactions

Floor Limits
(PR) Floor limits are zero for all card-not-present transactions with the exception of prestigious lodging merchants. This means they always require authorization regardless of the dollar amount of the transaction.

Owner/Manager

Staff Awareness of Authorization Policy
(PR) Be sure all sales staff know your authorization policy.
Reason Code 73: Expired Card

**Definition**
The card issuer received a transaction that was completed with an expired card and was not authorized.

**Most Common Causes**
The merchant accepted a card after its expiration or “Good Thru” date and did not obtain an authorization approval from the card issuer.

**Merchant Actions**

**Back-Office Staff**

**Card Not Expired—Key-Entered Transaction**
(PR) For key-entered transactions, the expiration date should be on the manually imprinted copy of the front of the card. If the expiration date on sales receipt shows the card had not expired at the time of the sale, send a copy of the receipt to your merchant bank. The chargeback is invalid regardless of whether authorization was obtained.

**Card Expired, Authorization Obtained**
(PR) If the card was swiped or a manual imprint made, an authorization approval was obtained as required, inform your bank of the transaction date and amount. Many merchant banks automatically handle this type of chargeback so you never see it.

**Card Expired, No Authorization Obtained**
(NR) If the card is expired and you did not obtain an authorization, accept the chargeback.

**Point-of-Sale Staff**

**Check Expiration Date**
(PM) Check the expiration or “Good Thru” date on all cards. A card is valid through the last day of the month shown; for example, if the Good Thru date is 04/08, the card is valid through April 30, 2008 and expires on May 1, 2008.

**Card-Not-Present, Authorization Obtained**
(PR) If the transaction was a MO/TO or Internet transaction, then the expiration date provided by the cardholder is considered correct. Many merchant banks automatically handle this type of chargeback, so you really never see it.
Reason Code 73: Expired Card (continued)

Owner/Manager

Check Card Expiration Date

(PM) Periodically remind point-of-sale staff to check the card’s expiration date before completing transactions and to always obtain an authorization approval if the card is expired.
Reason Code 76: Incorrect Transaction Code

<table>
<thead>
<tr>
<th>Definition</th>
<th>The card issuer received a complaint from a cardholder, stating that a debit was received for a transaction that should have been credited to the account.</th>

</tbody>
</table>
|                                                                           | (PM) Ensure all sales staff know procedures for issuing a credit voucher, including correct use of transaction codes on POS terminals.

**Merchant Actions Legend:**

(PR) Possible Remedy  (PM) Preventive Measure  (NR) No Remedy  (CS) Customer Service Suggestion
Reason Code 77: Non-Matching Account Number

| Definition | The account number transmitted to the card issuer did not match any account number on the card issuer’s master file, and the transaction was not authorized. |
| Most Common Causes | The merchant or service establishment:  
  - Incorrectly key-entered the account number  
  - Incorrectly recorded the account number for a mail order or telephone order |

**Catch-22**
After accepting the chargeback, the new transaction with the correct account number should be submitted within 30 days of the original transaction. Due to the chargeback cycle, in most cases merchants will be unable to meet this time frame, which may in turn result in a second chargeback for Reason Code 74, Late Presentment.

**Merchant Actions**

**Back-Office Staff**

**Account Number Matches**
(PR) If the account number on the sales receipt matches the account number cited on the chargeback, and the transaction received an authorization approval, return the chargeback to your merchant bank and request your bank to include the authorization log for this transaction when returning it to the card issuer.

**Account Number Doesn’t Match**
(NR) If the account number on the sales receipt does not match the correct account number cited on the chargeback, accept the chargeback, then process a new transaction with the correct account number, and be sure to request an approval code.

**Card-Not-Present Transactions**

**Transaction Authorized**
(PR) If the account number on the sales receipt matches the account number cited on the chargeback, and the transaction was authorized as a mail order, telephone order, or Internet transaction, return the chargeback to your merchant bank. Request the bank to include the authorization log for this transaction when returning it to the card issuer. Many merchant banks handle this type of chargeback automatically, so that you never receive them.

**Transaction Not Authorized**
(NR) Accept the chargeback.

**Point-of-Sale Staff**

**Terminal Can’t Read Card’s Magnetic Stripe**
(PM) If you swipe a card and the terminal cannot read the card’s magnetic stripe, request authorization by key entering the account number. Be sure the key-entered account number matches the embossed account number on the card; be careful not to transpose numbers. Use a manual imprinter to imprint the embossed information from the face of the card onto the sales receipt that is signed by the cardholder.
**Reason Code 77: Non-Matching Account Number (continued)**

**Terminal Not Working or No Terminal**
(PM) If your terminal is not working or you do not have a terminal, call your voice authorization center for authorization approval and write the authorization approval code on the sales receipt in the appropriate space. Use a manual imprinter to imprint the embossed information from the face of the card onto the sales receipt that is signed by the cardholder.

**Embosed Account Number Does Not Match**
(PM) Compare the account number displayed on your terminal or electronically printed on the sales receipt with the account number embossed on the card. If they do not match, do not complete the transaction. Call your voice authorization center and ask for a “Code 10 authorization.” The card issuer may ask you to pick up the card if you can do so safely.

**Card-Not-Present Transactions**

**Recording Account Numbers**
(PM) For phone orders, read the account number back to the customer to verify it.

**Obtaining Authorization**
(PM) Authorization is required for all card-not-present transactions.

**Owner/Manager**

**Card Acceptance Procedures**
(PM) Review card acceptance procedures with your point-of-sale staff. Staff should compare the account number embossed on the card with the account number printed on the related sales receipt or shown on the point-of-sale terminal. The two numbers must match. Do not accept the card if these numbers do not match— instruct your staff to call your voice authorization center and ask for a “Code 10 authorization,” (see Glossary). The card issuer may ask you to pick up the card if you can do so safely.

**Card-Not-Present Transactions**

**Card Acceptance Procedures**
(PM) Instruct staff on appropriate processing procedures for card-not-present transactions. Authorization is required for all transactions where a card and cardholder are not present, and staff should take extra care in recording account numbers on sales receipts and entering them into terminals. Staff should read the account number back to the customer when taking phone orders.

**Recurring Payment**
(PR) Because recurring payment transactions occur on a regular basis over time, it is possible that the cardholder’s account number could be closed or could change (for example, if a new card is issued due to a bank merger or account upgrade). If authorization is declined on a subsequent recurring payment transaction, contact the customer to obtain updated payment information.

## Processing Errors

### Reason Code 74: Late Presentment

<table>
<thead>
<tr>
<th>Definition</th>
<th>The card issuer received a transaction after the 30-day time frame and account number is blocked or closed.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Most Common Causes</td>
<td>The merchant or service establishment did not deposit the sales receipt with its merchant bank within the time frame specified in its merchant agreement.</td>
</tr>
<tr>
<td>Sales Receipt Deposited Late—Account Closed</td>
<td>(NR) If the sales receipt was not deposited within 30 to 180 days of the transaction date and the cardholder account has been closed, the chargeback is valid.</td>
</tr>
<tr>
<td>Sales Receipt Older than 181 Days</td>
<td>(NR) If the sales receipt was deposited more than 181 days after the transaction date, accept the chargeback. (In this situation, the cardholder account status is not a factor.)</td>
</tr>
<tr>
<td>Deposit Timing Guidelines</td>
<td>(PM) Deposit sales receipts with your merchant bank as soon as possible, preferably on the day of the sale or within the time frame specified in your merchant agreement.</td>
</tr>
</tbody>
</table>

---

**Merchant Actions Legend:**

(PR) Possible Remedy  (PM) Preventive Measure  (NR) No Remedy  (CS) Customer Service Suggestion
Reason Code 74: Late Presentment (continued)

Owner/Manager

Manual Deposit of Paper Sales Receipts
(PR) If you deposit paper sales receipts, ensure your staff deposits them on a regular schedule within the time frame required by your merchant bank.

Transaction Data Capture Terminals
(PR) If you currently process deposits manually, consider the costs and benefits of a transaction data capture system at the point of sale. Transaction data capture sales terminals allow you to electronically deposit your sales transactions after you have balanced them each day. Electronic cash registers are another option. Electronic cash registers can be set up so that your transactions are automatically deposited in batches or on a real-time basis.
## Reason Code 80: Incorrect Transaction Amount or Account Number or Invalid Adjustment

<table>
<thead>
<tr>
<th>Definition</th>
<th>The card issuer identified the transaction amount or account number that posted as different from what is shown on the sales receipt or for ATM transactions if an adjustment was incorrectly processed.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Most Common Causes</td>
<td>The merchant made a data entry error, i.e., keyed in the wrong amount or account number for that particular transaction.</td>
</tr>
</tbody>
</table>

### Merchant Actions

#### Back-Office Staff

**Transaction Amount or Account Number Is Same on Sales Receipt and Payment Documents**

(PR) If the transaction amount or account number on the sales receipt is the same as on the clearing record deposited for payment, provide supporting documentation to your merchant bank to re-present the item.

**Transaction Amount or Account Number Differs (Is Incorrect)**

(PR) If the transaction amount or account number on the sales receipt is not the same as on the clearing record, accept the chargeback. If the chargeback is due to an incorrect account number, process a new transaction using the correct one within 30 days of the original transaction date; however, do not process a credit since the chargeback already has performed this function. For incorrect-amount chargebacks, the chargeback amount will be the difference between the amount charged and the correct amount, so no further action is needed.

#### Point-of-Sale Staff

**Account Number Was Key-Entered**

(PM) If the card was present, but the account number was key-entered (i.e., the magnetic stripe on the card could not be read), be sure to use a manual imprinter to imprint the card’s embossed information on the sales receipt. Compare the keyed and imprinted account numbers to ensure the transaction was processed correctly.

**Altered Amounts**

(PM) Merchants must not alter a sales receipt after the cardholder has signed it and left the establishment. If the cardholder has been undercharged, attempt to contact the cardholder and obtain permission to adjust the receipt so that it reflects the correct amount.

### Merchant Actions Legend:

(PR) Possible Remedy  (PM) Preventive Measure  (NR) No Remedy  (CS) Customer Service Suggestion
Reason Code 82: Duplicate Processing

Definition
The card issuer received the same transaction more than once for posting to the cardholder’s account.

Most Common Causes
The merchant or service establishment:
- Entered the same transaction into the point-of-sale terminal more than once
- Electronically submitted the same batch of transactions to its merchant bank more than once
- Deposited with its merchant bank both the merchant copy and the bank copy of a sales receipt
- Deposited sales receipts for the same transaction with more than one merchant bank
- Created two sales receipts for the same purchase

Merchant Actions

Back-Office Staff
Sales Receipts Are Not Duplicates
(PR) Provide your merchant bank with information documenting that the two transactions are separate, or send legible photocopies of the alleged duplicate sales receipts and any other related documents, such as cash register receipts, to your merchant bank. The receipts should clearly indicate that the two transactions are not charges for the same items or services.

Sales Receipts Are Duplicates—Credit Not Processed
(NR) If you have not already deposited a credit to correct the duplicate, accept the chargeback. Do not process a credit now as the chargeback has performed that function.

Sales Receipts Are Duplicates—Credit Was Processed
(PR) If you identified the duplicate transaction and processed an offsetting credit before you received the chargeback, inform your merchant bank of the date the credit was issued. If your merchant bank requires other procedures, follow them. However, many merchant banks automatically look to see if a credit has been processed, so you may never see these chargebacks.

Review Sales Receipts Before Depositing
(PM) Review each batch of paper sales receipts prior to deposit to ensure that only bank copies—and not merchant copies—are included. If transactions are sent electronically for processing, ensure each batch is sent only once and as a separate batch number.

Merchant Actions Legend:
(PR) Possible Remedy  (PM) Preventive Measure  (NR) No Remedy  (CS) Customer Service Suggestion
Reason Code 82: Duplicate Processing (continued)

Point-of-Sale Staff
Enter Transactions Once
(PR) Take care to avoid entering the same transaction more than once.

Void Erroneous Sales Receipts
(PR) If a transaction is entered twice by mistake, be sure to void the duplicate.
Any sales receipt that contains errors should be voided.

Owner/Manager
Train Sales Staff
(PR) Provide training for new point-of-sale employees as well as refresher training for existing staff concerning duplicate processing and related transaction reversal, cancellation, and voiding procedures. Review these procedures with sales staff whenever a mistake has been made. If duplicate transactions occur frequently, pull questionable sales receipts and related chargebacks and discuss them with the staff involved. This type of review may indicate more training is needed.

Train Staff to Void Erroneous Sales Receipts
(PR) Train point-of-sale staff to void all sales receipts that have been erroneously completed.

Correct Transaction Deposit Procedures
(PR) Train back-office staff on correct transaction deposit procedures.

Merchant Actions Legend:
(PR) Possible Remedy  (PM) Preventive Measure  (NR) No Remedy  (CS) Customer Service Suggestion
Reason Code 86: Paid by Other Means

| Definition | The card issuer received a written complaint from the cardholder stating that he or she paid for the transaction by other means, i.e., cash, check, or other type of card. |
| Most Common Causes | The cardholder initially tendered a Visa card in payment for the transaction, but then decided to use cash or a check after a credit card receipt had been completed. The merchant erroneously deposited the credit-card sales receipt in addition to the cash, check, or other payment method. |

**Back-Office Staff**

**Visa Card Was the Only Form of Payment Tendered**
(PR) If a Visa card was the only form of payment tendered for the transaction, provide your merchant bank with sales records or other documentation showing that no other form of payment was used.

**Other Form of Payment Tendered—Credit Issued**
(PR) If a Visa card sales receipt was erroneously deposited after another form of payment was used, and a credit was issued, provide your merchant bank with the date of the credit. Many banks automatically search for credits, so you may not see these.

**Other Form of Payment Tendered—Credit Not Issued**
(NR) If a Visa card sales receipt was erroneously deposited after another form of payment was used, and a credit was not issued, accept the chargeback. Do not process a credit as the chargeback has already performed this function.

**Point-of-Sale Staff**

**When Other Form of Payment Used, Void Visa Sales Receipt**
(PM) If a customer decides to use another form of payment after you have completed a Visa card sales receipt for a transaction, make sure you void the Visa receipt, and do not deposit it.

**Owner/Manager**

**Train Staff to Void Erroneous Sales Receipts**
(PM) Train sales staff in proper procedures for processing transactions where a customer decides to use another form of payment after initially offering a Visa card. Specifically, staff should be instructed to void the Visa card sales receipt and ensure that it is not deposited.
Reason Code 96: Transaction Exceeds Limited Amount

**Definition**
The card issuer received a transaction that exceeded the allowable amount from a Limited-Amount, Self-Service Terminal, or Automated Fuel Dispenser (AFD) transaction.

**Most Common Causes**
The merchant processed a transaction from:
- A Limited-Amount Terminal and exceeded $25
- A Self-Service Terminal (including AFD) and exceeded $50
- An Automated Fuel Dispenser and exceeded:
  - $75 for Visa Corporate and Visa Purchasing cards
  - $150 for Visa Fleet cards
  - $50 for all other cards

**Merchant Actions**

**Back-Office Staff**

**Transaction was less than the allowable amount of $25, $50, or amounts specified for AFD**
(PR) – Provide documentation supporting transaction amount to merchant bank (e.g., copy of the sales receipt or audit tape).

**Transaction amount exceeded $25, $50, or amounts specified for AFD**
(NR) – Accept the chargeback. Transaction exceeded allowable limit for a Limited-Amount, Self-Service Terminal, or AFD.

**Credit Processed on Disputed Transaction**
(PR) – If the appropriate credit has been processed to the cardholder’s account on the disputed transaction, send your merchant bank evidence of the credit.

**Credit Not Processed on Disputed Transaction – Transaction exceeded allowable amount**
(NR) – If the appropriate credit has not yet been processed on the disputed transaction, accept the chargeback. Do not process a credit since the chargeback has already performed this function.

*Note: For AFD transactions, the amount of the card issuers’ chargeback is limited to the amount exceeding the specified amounts noted above.*
Reason Code 96: Transaction Exceeds Limited Amount (continued)

Chargeback was invalid
(PR) – If the transaction was not conducted at an unattended terminal (i.e., Limited-Amount, Self Service, or AFD) provide proof to merchant bank.

Example:
The card issuer claims the transaction exceeded the allowable amount for an AFD (Merchant Category Code 5542) transaction and processed a chargeback. The original transaction amount was $65, the card issuer processed a chargeback for $15 which represents the amount that exceeded the allowable amount. The merchant’s audit records show the transaction was completed inside the convenience store (Merchant Category Code 5541) and provides evidence to its merchant bank. In this example, the card issuer’s chargeback would be considered invalid if the merchant can provide a sales receipt with the cardholder’s signature and card imprint.

Note: To avoid chargebacks, ask your merchant bank to verify that your AFD and convenience store terminals are accurately programmed with the correct Merchant Category Codes. All AFD terminals should have a Merchant Category Code of 5542 and your inside store location should have Merchant Category Code of 5541.

Owner/Manager
Transaction was above $25, $50, or amount specified for AFD
(PM) Evaluate potential risk of chargeback exposure by ensuring terminals are properly set at transaction amount limits.

Example:
If you are an AFD merchant consider limiting fuel distribution to Visa’s allowable amount. Complying with Visa’s allowable limits will reduce your exposure to this chargeback reason code.
Cancelled or Returned

Reason Code 41: Cancelled Recurring Transaction

**Definition**
The card issuer received a claim by a cardholder that:

- The merchant was notified to cancel the recurring transaction but has since billed the customer.
- The transaction amount exceeds the pre-authorized dollar amount range, OR the merchant was supposed to notify the cardholder prior to processing each recurring transaction but has not done so.

**Most Common Causes**

**The cardholder:**
- Withdrew permission to charge the account
- Cancelled payment of a membership fee
- Cancelled the card account

**The card issuer:**
- Charged back a previous recurring transaction, and the cardholder did not expressly renew
- Cancelled the card account

**The merchant:**
- Received notice before the transaction was processed that the cardholder account was closed
- Exceeded the pre-authorized dollar amount range and did not notify the cardholder in writing within ten days prior to processing the transaction
- Notified the cardholder in writing within 10 days of processing the recurring transaction, after which the cardholder notified the merchant not to charge the account

**Merchant Actions**

**Back-Office Staff**

**Transaction Cancelled and Credit Issued**
(PR) If the cardholder claimed to have cancelled the recurring transaction, inform your merchant bank of the date that the credit was issued.

**Transaction Cancelled and Credit Not Yet Processed**
(NR) If a credit has not yet been processed to correct the error, accept the chargeback. Do not process a credit since the chargeback has already performed this function.

*Merchant Actions Legend:*
(PR) Possible Remedy  (PM) Preventive Measure  (NR) No Remedy  (CS) Customer Service Suggestion*
Reason Code 41: Cancelled Recurring Transaction (continued)

Transaction Not Cancelled
(NR) If you have no record that the cardholder cancelled the transaction, accept
the chargeback. The cardholder does not have to supply evidence that you
received the cancellation notice.

Transaction Cancelled—Services Used
(PR) If the customer claimed they were billed for the service after they cancelled,
you may need to supply proof to your merchant bank that the bill in question
covered services used by the customer between the date of the customer’s prior
billing statement and the date the customer requested cancellation.

Final Billing
(CS) (PM) If the customer has cancelled the recurring payment transaction and
there is a final payment still to be charged, contact the cardholder directly
for payment.

Customer Cancellation Requests
(CS) (PM) Always respond in a timely manner to customer requests relating to
renewal or cancellation of recurring transactions. Check customer logs daily for
cancellation or nonrenewal requests, and take appropriate action to comply with
them in a timely manner. Send notification to the customer that his or her
recurring payment account has been closed. If any amount is owed for services up
to the date of cancellation, seek another form of payment if necessary.

Credit Cardholder Account
(CS) (PM) Ensure credits are processed promptly. When cancellation requests are
received too late to prevent the most recent recurring charge from posting to the
customer’s account, process the credit and notify the cardholder.

Transaction Exceeds Pre-authorized Amount Ranges
(PM) (PR) Flag transactions that exceed pre-authorized amount ranges, and
notify customers of this amount at least 10 days in advance of submitting the
recurring transaction billing. If the customer disputes the amount after the billing,
send evidence of the notification to your merchant bank.

Customer Complaints
(CS) (PM) Check customer logs daily for customer complaints, especially those
relating to transaction amounts or failure to notify customers in advance of a
recurring transaction that exceeds the pre-authorized amount range. Follow up
with customers.

Owner/Manager
Train Staff on Proper Procedures
(PM) Train your sales and customer service staff on the proper procedures for
processing recurring transactions as these transactions are particularly liable to
cardholder disputes.
Reason Code 53: Not as Described or Defective Merchandise

**Definition**

The card issuer received a notice from the cardholder, stating that the goods or services were:

- Not the same as shown and described on the screen for Internet transactions, or as described on the sales receipt or other documentation presented to the cardholder at the time of the transaction.
- Not the same as the merchant’s verbal description for a telephone transaction.
- Shipped to the cardholder and received, but was damaged or defective.

For this reason code, the cardholder must have made a valid attempt to resolve the dispute or return the merchandise. A valid attempt to return may be to request that the merchant come retrieve the goods at their own expense.

**Most Common Causes**

The merchant:

- Sent the wrong merchandise to the cardholder
- Merchandise was damaged during shipment
- Inaccurately described the merchandise or services
- Did not cancel the services purchased by the cardholder
- Did not perform the services as described
- Did not accept the returned merchandise
- Accepted the returned merchandise but did not credit the cardholder’s account

**Merchant Actions**

**Back-Office Staff**

**Credit was Processed**

(PR) If merchandise was returned or services were cancelled and a credit was processed to the cardholder’s account, provide your merchant bank with information or evidence of the credit.

**Returned Merchandise Not Received/Services Not Cancelled**

(PR) If you have not received the returned merchandise (double-check your incoming shipment records to verify) or the cardholder has not cancelled the service, advise your merchant bank. (The cardholder must make a valid attempt to return merchandise or cancel the service).

**Returned Merchandise Received—Credit Not Processed**

(NR) If the cardholder’s complaint is valid and you received the returned merchandise but have not yet credited the cardholder’s account, accept the chargeback. Do not process a credit since the chargeback has performed this function.

**Merchant Actions Legend:**

(PR) Possible Remedy (PM) Preventive Measure (NR) No Remedy (CS) Customer Service Suggestion
Reason Code 53: Not as Described or Defective Merchandise (continued)

Back-Office Staff

Merchandise Was As Described
(PR) If the merchandise was as described, provide your merchant bank with specific information and invoices to refute the cardholder’s claims.

Merchandise Returned Because Damaged
(PR) If merchandise was returned because it was damaged, provide evidence that it was repaired or replaced; provided the cardholder requested replacement or repair.

Services Cancelled—Credit Not Processed
(NR) If the cardholder cancelled the service but you have not yet credited the cardholder’s account, accept the chargeback. Do not process a credit since the chargeback has already performed this function.

Service Performed Was As Described
(PR) If the service performed was as described or performed before the cardholder cancelled, provide your merchant bank with as much specific information and documentation as possible refuting the cardholder’s claims. It is recommended that you specifically address each and every point the cardholder makes.

Owner/Manager

Accurate Descriptions of Merchandise/Service
(CS) (PM) Ensure that descriptions of merchandise or services shown in catalogs, on Internet screens and sales receipts, or used in telephone order-taking scripts are accurate, complete, and not unintentionally misleading.

Correct Merchandise Shipped
(CS) (PM) Regularly review your shipping and handling processes to ensure that orders are being filled accurately.

Train Staff on Proper Procedures
(CS) (PM) Train staff on proper procedures on taking and filling orders, and schedule review sessions at least annually.

For Your Information

Chargeback Amount Is Limited. The chargeback amount is limited to the amount of the merchandise returned or services cancelled. The chargeback may include shipping and handling fees for shipment of the defective merchandise.

Card issuer Waiting Period. If merchandise was returned, the card issuer must wait at least 30 calendar days from the date the cardholder returned the merchandise (to allow sufficient time for you to process a credit to the cardholder’s account) before generating a chargeback.

Quality Disputes. This chargeback code also may be used for quality disputes (for example, a car repair situation).
## Reason Code 85: Credit Not Processed

| Definition | The card issuer received a notice from a cardholder acknowledging participation in a transaction for which goods were returned or services cancelled, but:  
|---|---|
|   | • The cardholder has not received a written refund acknowledgement or credit voucher from the merchant.  
|   | • The credit has not appeared on the customer’s Visa statement.  

### Most Common Causes

**The merchant:**

- Did not issue a credit  
- Issued the credit but did not deposit the credit with its merchant bank in time for it to appear on the cardholder’s next statement  
- Did not issue a credit because the business does not accept returns, but did not properly disclose its return policy.

### Merchant Actions

**Back-office Staff**

**Merchandise or Cancellation Not Received**

(PR) If you never received, or accepted, returned merchandise or a cardholder’s cancellation, advise your merchant bank immediately. Proof of cancellation is not required from the cardholders.

**Merchandise Returned Contrary to Disclosed Policy**

(PR) If the cardholder returns merchandise or cancels services in a manner contrary to your disclosed return or cancellation policy, provide your merchant bank with documentation showing that the cardholder was aware of and agreed to your policy at the time of the transaction. Specifically, the cardholder’s signature must appear on a sales receipt or other document stating your return policy.

**Back-of-receipt Disclosure**

If your establishment’s return policy is on the back of a receipt that has been signed on the front and initialed on the back as required by Visa policy, you must provide your merchant bank with copies of both sides of the receipt. If the return policy is on the back of the receipt and is not signed or initialed, you have not provided evidence of proper disclosure.

**Credit Was Issued**

(PR) If a customer returns merchandise or cancels services in accordance with your disclosed return or cancellation policy, and you have already issued a credit, inform your merchant bank of the date that the credit was issued.

---

*Merchant Actions Legend:  
(PR) Possible Remedy  (PM) Preventive Measure  (NR) No Remedy  (CS) Customer Service Suggestion*
Reason Code 85: Credit Not Processed (continued)

Credit Not Yet Issued
(NR) If a customer returns merchandise or cancels services in accordance with your disclosed return or cancellation policy, and if you have not already issued a credit, accept the chargeback. Do not process a credit since the chargeback already has performed this function.

Issue Credits Promptly and Properly
(PM) Ensure credits are properly issued to the same Visa account that was used for the original Visa purchase.

Issue Credits Promptly
(CS) (PM) If merchandise is returned to you or services cancelled in accordance with your disclosed return or cancellation policy, issue a credit and send the customer a letter or postcard advising that you received the merchandise or cancellation request and have issued a credit to his or her account. Visa recommends that you note that due to timing, the credit may appear on the customer’s next billing statement or the one after that. Typically, it takes up to five business days to post a credit.

Card-Not-Present Transactions

Gift Returns
(PR) In cases where a gift recipient has returned a gift ordered by mail, telephone, or Internet, you may provide a cash or check refund, an in-store credit receipt, or another appropriate form of credit to the gift recipient. If the cardholder claims a credit was not issued to his or her account for the gift, provide appropriate documentation or information to your merchant bank that the credit was given to the gift recipient.

Point-of-Sale Staff

Issuing a Credit
(CS) (PM) If a customer returns merchandise as allowed by your company’s return policy, issue a credit to the same Visa account that was used for the original transaction and give the customer a copy of the credit receipt. Tell customers to retain their credit receipts until the related credit appears on their Visa statement. For gift cards, issue a cash refund or in-store credit if the cardholder states the gift card has been discarded.

Return Policy Disclosure
(PR) Be sure your establishment’s return policy is clearly disclosed on sales receipts near the customer signature line before asking the cardholder to sign. If the disclosure is not properly positioned, the cardholder’s signature should also be obtained in close proximity to a disclosure printed on a related document, such as a contract, invoice, or customer agreement. If the disclosure is on the back of the receipt, the cardholder must sign the front and initial the back by the disclosure statement.

For gift returns, if credit is to be processed to a charge card, the credit must be issued to the same Visa account number that was used for the original transaction.

Issue credits in a timely manner. Neglecting to issue credits promptly generates unnecessary chargebacks, and creates additional back-office expenses.

Merchant Actions Legend:
(PR) Possible Remedy  (PM) Preventive Measure  (NR) No Remedy  (CS) Customer Service Suggestion
**Reason Code 85: Credit Not Processed (continued)**

**Owner/Manager**

**Return Policy Disclosure—At Point of Sale**

(CS) (PM) Post your return policy at the cash register so that it is clearly visible to customers. Keep in mind, however, that you are required to disclose your return policy on a sales receipt or other document that is signed by the cardholder at the time of the transaction.

**Return Policy Disclosure—On Sales Receipts**

(PM) Be sure your return policy is clearly disclosed on your sales receipts near the customer signature line. Customers need to know your policy before they complete a sale. On receipts produced by scroll printer terminals, the disclosure must be printed in close proximity to the signature line, typically at the bottom of the transaction receipt near the transaction amount. As previously noted, if your return policy disclosures are on the back of your store’s receipts, the customer must sign the front of the receipt and initial the back of the receipt by the disclosure statement.

**No-Return Policy Disclosure**

(PM) If your business has a limited return policy or does not allow returns at all, the words “no returns” or similar words must be preprinted on all copies of the sales receipts near the cardholder signature line.

**Card-Not-Present Transactions**

**Disclosure of Return/Refund Policy**

(PM) Ensure that your establishment’s return or refund policy is always clearly stated in your printed advertising materials, catalog and catalog order forms, and, for Internet merchants, on your electronic order screen. Always explain your policy to customers who place orders by phone. Be sure to include refund information with the initial transaction. For Internet transactions, your web site should include a screen with your return or refund policies, which appears automatically during the check-out process (that is, it is not on a separate disclosure screen that the customer has to click to open). The screen should include I Accept or Agree buttons for the customer to click on before completing the transaction, indicating that he or she has read and agrees to your policies.

**Obtain Customer Signature**

(PM) For card-not-present merchants processing mail order/telephone order transactions describing your return policy in a catalog or verbally on the phone does not constitute proper disclosure unless you also obtain a customer signature indicating disclosure was provided. Such policy descriptions may support your case for having alerted the customer to your policy.
Non-Receipt of Goods or Services

Reason Code 30: Services Not Provided or Merchandise Not Received

**Definition**
The card issuer received a claim from a cardholder that merchandise or services ordered were not received or that the cardholder cancelled the order as the result of not receiving the merchandise or services by the expected delivery date.

**Most Common Causes**
The merchant:
- Did not provide the services
- Did not send the merchandise
- Billed for the transaction before shipping the merchandise
- Did not send the merchandise by the agreed-upon delivery date

**Merchant Actions**

**Back-Office Staff**

**Merchandise Was Delivered**
(PR) If the merchandise was delivered by the agreed-upon delivery date, contact your merchant bank with details of the delivery or send your merchant bank evidence of delivery, such as a delivery receipt signed by the cardholder or a carrier’s confirmation that the merchandise was delivered to the correct address. If the merchandise was software that was downloaded via the Internet, provide evidence to your merchant bank that the software was downloaded to or received by the cardholder.

**Less Than 30 Days Since Transaction and No Delivery Date Set**
(PR) If no delivery date has been specified, and the card issuer charged back the transaction less than 30 days from the transaction date, send a copy of the sales receipt to your merchant bank pointing out that 30 days have not yet elapsed. You should also state the expected delivery date.

**Specified Delivery Date Has Not Yet Passed**
(PR) If the specified delivery date has not yet passed, return the chargeback to your merchant bank with either information or a copy of the documentation showing the expected delivery date. In general, you should not deposit sales receipts until merchandise has been shipped. For custom-made merchandise, you may deposit the entire transaction amount before shipping, provided you notify the cardholder at the time of the transaction.

*Merchant Actions Legend:*
(PR) Possible Remedy  (PM) Preventive Measure  (NR) No Remedy  (CS) Customer Service Suggestion
Reason Code 30: Services Not Provided or Merchandise Not Received (continued)

Merchandise Shipped After Specified Delivery Date
(PR) If the merchandise was shipped after the specified delivery date, provide your merchant bank with the shipment date and expected arrival date, or proof of delivery and acceptance by the cardholder.

Services Were Rendered
(PR) If the contracted services were rendered, provide your merchant bank with the date the services were completed and any evidence indicating that the customer acknowledged receipt.

Point-of-Sale Staff
Delayed Delivery
(PM) (CS) If delivery of merchandise is to be delayed, notify the customer in writing of the delay and the expected delivery date. As a service to your customer, give the customer the option of proceeding with the transaction or cancelling it (depending on your customer service policy).

Expected Delivery
(PM) For any transaction where delivery occurs after the sale, the expected delivery date should be clearly indicated on the sales receipt or invoice.

Owner/Manager
Proof of Delivery
(PM) If you are shipping merchandise without requesting proof of delivery, consider the costs and benefits of doing so compared to the value of the merchandise you ship. Proof of delivery—such as certified mail or a carrier’s certification that the merchandise was delivered to the correct address and signed for by the cardholder—will allow you to return the chargeback if the customer claims the merchandise was not received.

Software Downloaded via Internet
(PM) If you sell software that can be downloaded via the Internet, Visa suggests that you design your web site to enable you to provide evidence to your merchant bank that the software was successfully downloaded and received by the cardholder.

Merchant Actions Legend:
(PR) Possible Remedy  (PM) Preventive Measure  (NR) No Remedy  (CS) Customer Service Suggestion
Cardholders expect and depend on accurate, efficient card processing when shopping with a Visa merchant.

Your sales and customer service associates play a critical role in ensuring proper transaction processing. Consequently, ensuring that your staff receives regular and ongoing training in Visa card acceptance policies and procedures benefits everybody.

• Sales and customer service associates benefit because they are given the skills and knowledge they need to do their jobs accurately and confidently.
• You benefit because:
  – Customer service is enhanced, which in turn leads to increased sales.
  – You have fewer fraudulent transactions, which reduces related losses.
  – You have fewer transaction receipt copy requests and chargebacks, which reduces related expenses.

The Visa resources listed in this section can be used to help educate your sales and customer services associates and bring them up to speed on all the latest procedures.

To order any of the training materials listed in this chapter, call Visa Fulfillment at (800) VISA-311 or visit www.visa.com/merchant.
Training Materials for Card-Present Merchants

**Point-of-Sale Reminder Card**
Designed for use at the point of sale, this six-panel card helps sales staff remember the correct steps for accepting and processing Visa cards.

*Price: $0.25 each*  
*VRM 08.07.06*

**It Pays to Swipe the Stripe**
Designed for both merchants and point-of-sale staff, this brochure includes quick and easy tips to ensure proper use of magnetic-stripe readers. It also covers the basics of key entry and what to do when a magnetic stripe can't be read.

*Price: $0.25 each*  
*VRM 10.02.05*

**Improve Profitability: Eliminate Illegible Sales Drafts**
This six-panel brochure outlines the reasons why sales drafts must be readable and provides tips on how to make sure customer transactions can be tracked. It is designed for use at the point of sale or for posting in training areas, lunchrooms, or wherever your sales staff can see it as a quick reminder.

*Price: $0.25 each*  
*VRM 04.25.07*

**Visa Pin Security Tools and Best Practices for Merchants**
*Visa Pin Security Tools and Best Practices for Merchants* provides an overview of Visa's initiatives and requirements, circumstances that lead to PIN vulnerabilities, and best practices to avoid PIN and data theft.

*Price: Free*  
*VRM 08.05.07*
Card Acceptance and Fraud Awareness for Merchants: “Fraud Factor”
This lively, entertaining video describes card-acceptance procedures for retail merchants. It also reviews card security features and outlines what to do when something about the transaction raises suspicions.
Price: $3.00  VRM 08.17.06

Visa’s How-To For Restaurant Owners and Managers
This four-page brochure offers best practices to help restaurant merchants prevent both fraud and chargebacks. Topics covered range from merchant set-up and zero-percent tip authorization to skimming and chargeback management.
Price: Free  VRM 01.22.07

Visa Tips for Restaurant Staff
The Visa Tips for Restaurant Staff serves as an invaluable tool for employees who are responsible for processing card transactions. Designed for ease of use, the on-the-job reference brings together practical information and practices to ensure proper payment acceptance, minimize fraud exposure, and reinforce 0% tip authorization requirements.
Price: Free  VRM 08.15.06
Training Materials for Card-Not-Present Merchants

**E-Commerce Merchants’ Guide to Risk Management**

This 108-page book features risk-management best practices for selling goods and services on the Internet. It covers a range of topics, including e-commerce start-up, website utility, fraud prevention, Visa card acceptance, cardholder information security, and chargeback handling and loss recovery.

*Price: $2.00 each*  
*VRM 04.01.05*

**Visa Card Verification Value 2 (CVV2) Merchant Guide**

This four-page brochure provides a detailed look at the CVV2 process. It includes instructions on how to use CVV2 to maximize security and protect against fraud.

*Price: Free*  
*VRM 03.14.06*

**Merchant Guide to Visa Address Verification Service (AVS)**

This 16-page guide describes AVS, Visa’s risk management service for card-not-present transactions. Targeted at MO/TO and Internet merchants, the guide explains how to maximize the fraud-reduction benefits of AVS and also covers recent system enhancements and dial-up access.

*Price: $0.25 each*  
*VRM 01.01.06*

**Protect Your E-Commerce Channel Against Fraud**

This three-fold brochure is a fast and easy reference for Internet merchants. It contains best practices to help prevent fraud and fraud-related losses for online transactions.

*Price: $5.00 for 100*  
*VRM 03.15.07*

**Merchant Best Practices for Recurring Transactions**

This brochure contains merchant tools and best practices for effectively handling recurring transactions. Step-by-step procedures cover all aspects of the recurring-transaction life cycle, from initial setup to handling customer-dispute chargebacks.

*Price: Free*  
*VRM 03.03.06*
Training Materials on Cardholder Information Security Program

**Visa Cardholder Information Security Program CISP Overview**
Intended for use as a quick reference, this flyer contains the “Digital Dozen,” the 12 security standards required for CISP compliance.

*Price: Free*  VRM 08.30.06

**Just Another Day at the Office**
This 10-minute video uses a comic approach to highlight the administrative and physical issues that are critical for protecting cardholder data.

*Price: $3.00 video/DVD*  VBS 12.01.00

**Additional Resources**

**Visa USA Merchant Catalog**
This catalog contains a comprehensive list of all currently available Visa training materials.

*Price: Free*  VRM 07.24.06

**Visa USA Web Site (www.visa.com/merchant)**
This web site links to a comprehensive range of products and services for Visa merchants.
**Account number**
The 16-digit account number that appears in print on the front of all valid Visa cards. The number is one of the card security features that should be checked by merchants to ensure that a card-present transaction is valid.

**Address Verification Service (AVS)**
AVS allows merchants that accept card-not-present transactions to compare the billing address (the address to which the card issuer sends its monthly statement for that account) given by a customer with the billing address on the card issuer’s master file before shipping an order. AVS helps merchants minimize the risk of accepting fraudulent transactions in a card-not-present environment by indicating the result of the address comparison.

**Authorization**
The process by which a card issuer approves or declines a Visa card purchase. Authorization occurs automatically when you swipe the magnetic stripe of a payment card through a card reader. See also: Voice Authorization Center.

**“Call” or “Call Center” response**
A response to a merchant’s authorization request indicating that the card issuer needs more information about the card or cardholder before a transaction can be approved; also called a referral response.

**Card acceptance procedures**
The procedures a merchant or merchant employee must follow at the point of sale to ensure a card and cardholder are valid.

**Card expiration date**
See Good Thru date.

**Cardholder**
The person to whom a Visa card is issued.

**Card issuer**
A financial institution that issues Visa cards.

**Card-not-present**
A merchant, market, or sales environment in which transactions are completed without a valid Visa card or cardholder being present. Card-not-present is used to refer to mail order, telephone order, and Internet merchants and sales environments.
Card-present
A merchant, market or sales environment in which transactions can be completed only if both a valid Visa card and cardholder are present. Card-present transactions include traditional retail—department and grocery stores, electronics stores, boutiques, etc.—cash disbursements, and self-service situations, such as gas stations and grocery stores, where cardholders use unattended payment devices.

Card security features
The alphanumeric, pictorial, and other design elements that appear on the front and back of all valid Visa credit and debit cards, as specified in the Visa U.S.A. Inc. Operating Regulations. Card-present merchants must check these features when processing a transaction at the point of sale to ensure that a card is valid.

Card Verification Value 2 (CVV2)
A Visa fraud prevention system used in card-not-present transactions to ensure that the card is valid. The CVV2 is the three-digit value that is printed on the back of all Visa cards. Card-not-present merchants ask the customer for the CVV2 and submit it as part of their authorization request. For information security purposes, merchants are prohibited from storing CVV2 data.

Cardholder Information Security Program (CISP)
A Visa program that establishes data security standards, procedures, and tools for all entities—merchants, service providers, issuers, and merchant banks—that store Visa cardholder account information. CISP compliance is mandatory.

Cash disbursement
A bankcard transaction involving the payment of cash or travelers cheques to a cardholder. In general, only financial institution branches are allowed to make cash disbursements.

Chargeback
A transaction that is returned as a financial liability to a merchant bank by a card issuer, usually because of a disputed transaction. The merchant bank may then return or “charge back” the transaction to the merchant.

Code 10 call
A call made by a sales associate to the merchant’s voice authorization center when the appearance of a card or the actions of a cardholder suggest the possibility of fraud. The term “Code 10” is used so calls can be made without arousing suspicion while the cardholder is present. Specially trained operators then provide assistance to point-of-sale staff on how to handle the transaction.

Copy request
A request by a card issuer to a merchant bank for a copy or facsimile of a sales receipt for a disputed transaction. Depending on where sales receipts are stored, the merchant bank either fulfills the copy request itself or forwards it to the merchant for fulfillment. A copy request is also known as a retrieval request.
Credit receipt
A receipt that documents a refund or price adjustment a merchant has made or is making to a cardholder’s account; also called credit voucher

CyberSource Advanced Fraud Screen Enhanced by Visa
A real-time fraud-detection service that examines transactions generated from online stores. It estimates the level of risk associated with each transaction and provides merchants with risk scores, enabling them to more accurately identify potentially fraudulent orders.

Disclosure
Merchants are required to inform cardholders about their policies for merchandise returns, service cancellations, and refunds. How this information is conveyed, or disclosed, varies for card-present and card-not present merchants, but in general, disclosure must occur before a cardholder signs a receipt to complete the transaction.

“Doing Business As” (DBA)
A merchant’s legal business name as differentiated from the names of a company’s principals or other entity that owns or manages the business. A DBA that is significantly different from the principals’ or other entity’s name can result in an unrecognizable merchant name, or descriptor, on a cardholder’s monthly Visa statement, which can in turn lead to potential copy requests and chargebacks.

Dove hologram (For original Visa card—Good through 2010)
A three-dimensional hologram of a dove in flight that appears on all valid Visa cards. When the card is tilted back and forth, the dove should appear to “fly.” The dove hologram is one of the card security features that merchants should check to ensure a card-present transaction is valid.

Dove hologram (For updated Visa card—Beginning January 2006)
A multiple-color animated dove that appears in the holographic magnetic stripe on the back of all valid updated Visa cards.

Dynamic Currency Conversion (DCC) Service
An optional service, which is facilitated by a merchant at the point of sale with either a third party agent or through its merchant bank. The DCC allows a cardholder to see the transaction amount in his or her billing currency and the merchant’s pricing currency. This way, the cardholder knows exactly how much the goods or services cost, and is able to make value judgments quickly and easily.

Electron card
A Visa International debit card that is currently accepted, but not issued in the United States and can only be used for card-present transactions. Electron cards have slightly different security features than other Visa cards: the front of the card contains an Electron rather than dove hologram, and the 16-digit account number is printed, not embossed.
Exception file
A list of lost, stolen, counterfeit, fraudulent, or otherwise invalid account numbers kept by individual merchants or their third-party processors. The exception file should be checked as part of the authorization process, particularly for transactions that are below a merchant’s floor limit.

Firewall
A security tool that blocks access from the Internet to files on a merchant’s or third-party processor’s server and is used to ensure the safety of sensitive cardholder data stored on a server.

“Flying V” (For original Visa Card—Good through 2010)
The stylized, embossed “V” located to the right of the Good Thru date on all valid Visa cards. The “flying V” is one of the card security features that should be checked by merchants to ensure that a card-present transaction is valid.

Good Thru date
The date after which a bankcard is no longer valid, embossed on the front of all valid Visa cards. The Good Thru date is one of the card security features that should be checked by merchants to ensure that a card-present transaction is valid. See also: Card expiration date.

High-Risk Chargeback Monitoring Program (HRCMP)
A Visa program that notifies merchant banks when a high-risk merchant has a chargeback-to-transaction rate of over one percent.

High-risk merchant
A merchant that is at a high risk for chargebacks due to the nature of its business. As defined by Visa, high-risk merchants include direct marketers, travel services, outbound telemarketers, inbound teleservices, and betting establishments. See also: High-Risk Chargeback Monitoring Program

Internet Protocol address
A unique number that is used to represent individual computers in a network. All computers on the Internet have a unique IP address that is used to route messages to the correct destination.

Key-entered transaction
A transaction that is manually keyed into a point-of-sale device.

Magnetic stripe
The magnetic stripe on the back of all Visa cards is encoded with account information as specified in the Visa U.S.A. Inc. Operating Regulations. The stripe is “read” when a card is swiped through a POS terminal. On a valid card, the account number on the magnetic stripe matches the account number on the front of the card.

Magnetic-stripe reader
The component of a point-of-sale device that electronically reads the information on a payment card’s magnetic stripe.
Mail order/telephone order (MO/TO)
A merchant, market, or sales environment in which mail or telephone sales are the primary or a major source of income. Such transactions are frequently charged to customers’ bankcard accounts. See also: Card-not-present.

Member
An organization that is a member of Visa and which issues cards or signs merchants, or does both.

Merchant agreement
The contract between a merchant and a merchant bank under which the merchant participates in the Visa payment system, accepts Visa cards for payment of goods and services, and agrees to abide by certain rules governing the acceptance and processing of Visa transactions. Merchant agreements may stipulate merchant liability with regard to chargebacks and may specify time frames within which merchants are to deposit transactions and respond to requests for information.

Merchant bank
A financial institution that enters into agreements with merchants to accept Visa cards as payment for goods and services; also called acquirers or acquiring banks.

Merchant Chargeback Monitoring Program (MCMP)
A Visa program that alerts merchant banks when one of their merchants has a chargeback-to-transaction rate of over one percent. Merchants then work with the bank to reduce their chargeback rates to acceptable levels. Failure to reduce chargebacks can result in fines for a merchant.

Payment gateway
A system that provides services to Internet merchants for the authorization and clearing of online Visa transactions.

Pick-up response
An authorization response instructing a card-present merchant to refuse a transaction and recover the card. In all circumstances, card recovery should only be attempted if it can be done by reasonable and peaceful means.

Point-of-sale terminal (POS terminal)
The electronic device used for authorizing and processing bankcard transactions at the point of sale.

Printed number
A four-digit number that is printed below the first four digits of the printed or embossed account number on all valid Visa cards. The four-digit printed number should begin with a “4”, and be the same as the first four digits of the account number above it. The printed four-digit number is one of the card security features that merchants should check to ensure that a card-present transaction is valid.
Processor
A member, or Visa-approved non-member acting as the agent of a member, that provides authorization, clearing, or settlement services for merchants and members. The Visa U.S.A. Inc. Operating Regulations refers to the three types of processors: authorizing processors, clearing processors, and V.I.P. system users. See also: VisaNet processor.

Representment
A chargeback that is rejected and returned to a card issuer by a merchant bank on the merchant’s behalf. A chargeback may be re-presented, or redeposited, if the merchant or merchant bank can remedy the problem that led to the chargeback. To be valid, a representment must be in accordance with Visa U.S.A. Inc. Operating Regulations.

Sales receipt
The paper or electronic record of a bankcard transaction that a merchant submits to a merchant bank for processing and payment. In most cases, paper drafts are now generated by a merchant’s POS terminal. When a merchant fills out a draft manually, it must include an imprint of the front of the card.

Signature panel (For original Visa Card—Good through 2010)
The panel for cardholders’ signatures on the back of all valid Visa cards. Valid panels are white with the repeated word “VISA” printed at an angle in blue and gold. It may also contain the full or truncated account number and the three-digit CVV2, printed in reverse italics. The words “Not Valid Without Signature” or “Authorized signature” should also appear below or to the side of the panel on most Visa cards. The signature panel is one of the card security features merchants should check to ensure that a card-present transaction is valid.

Signature panel (For updated Visa card—Beginning January 2006)
The panel for cardholders’ signatures on the back of all valid Visa cards. A valid panel may have a horizontal stripe pattern or a custom design. The signature panel is one of the card security features merchants should check to ensure that a card-present transaction is valid.

Skimming
The replication of account information encoded on the magnetic stripe of a valid card and its subsequent use for fraudulent transactions in which a valid authorization occurs. The account information is captured from a valid card and then re-encoded on a counterfeit card. The term “skimming” is also used to refer to any situation in which electronically transmitted or stored account data is replicated and then re-encoded on counterfeit cards or used in some other way for fraudulent transactions.
Split tender
The use of two forms of payment, or legal tender, for a single purchase. For example, when buying a big-ticket item, a cardholder might pay half by cash or check and then put the other half on his or her Visa credit card. Individual merchants may set their own policies about whether or not to accept split-tender transactions.

Third-party processor
A non-member organization that performs transaction authorization and processing, account record keeping, and other day-to-day business and administrative functions for issuers and merchant banks.

Transaction
The act between a cardholder and merchant that results in the sale of goods or services.

Unsigned card
A seemingly valid Visa card that has not been duly signed by the legitimate cardholder. Merchants cannot accept an unsigned card until the cardholder has signed it, and the signature has been checked against valid government identification, such as a driver's license or passport.

Verified by Visa
A Visa Internet payment authentication system that validates a cardholder's ownership of an account in real-time during an online payment transaction. When the cardholder clicks “Buy” at the checkout page of a participating merchant website, a Verified by Visa screen automatically appears on the cardholder’s desktop. The cardholder enters a password that allows the card issuer to verify his or her identity.

Visa ReaderCleaner™
A specially treated card that effectively removes dirt, magnetic oxides, and other contaminants from concealed magnetic heads in POS devices. The heads should be kept clean so that Visa cards can be swiped and their magnetic stripes read quickly and easily, thus avoiding key-entered transactions.

VisaNet processor
A processor directly connected to VisaNet. See also: Processor.

Voice authorization
An authorization obtained by telephoning a voice authorization center.

Voice authorization center
An operator-staffed center that handles telephone authorization requests from merchants who do not have electronic POS terminals or whose electronic terminals are temporarily not working, or for transactions where special assistance is required. Voice authorization centers also handle manual authorization requests and Code 10 calls.
